TECHNICAL CATALOGUE

RELAYS

ELKO EP

We are traditional, innovative and purely Czech development manufacturer of electronic devices and we have been your partner in the field of electroinstallations for 27 years.

ELKO EP employs about 330 people, exports its products to more than seventy countries, and has representatives in fifteen foreign branches. Company of the Year of the Zlín Region, Visionary of the Year, Global Exporter of the Year, Participation in the Czech TOP 100, these are just some of the awards received. Still, we are not finished. We are constantly striving to move forward in the field of innovation and development. That's our primary concern.

Millions of relays, thousands of satisfied customers, hundreds of our own employees, twenty seven years of research, development and production, fifteen foreign branches, one company. ELKO EP, innovative- a purely Czech company based in Holešov, where development, production, logistics, service and support go hand in hand. We primarily focus on developing and manufacturing systems for building automation in the residential, commercial and industrial sector, a wide range of Smart city facilities and the so-called Internet of Things (IoT).

WE ARE

DEVELOPERS

In the new R&D center, more than 30 engineers develop new products and extend the functionality of existing products

PRODUCERS

modern antistatic spaces, 2x fully automated SMD production lines, 2 shift operations.

SUPPORT

24 hours / 7 days / 360 days we not only provide technical support but also logistics.

SELLERS

personal access to more than 70 sales representatives in ELKO EP Holding provides impeccable services and superior products at an affordable price.

Product Lines ELKO EP

relay

Timers/Relays

Time relays, auxiliary relays, installation contactors, memory and bistable relays, staircase switches, time switches, twilight and light switches, dimmers and light intensity controllers, power supplies and bell transformers, controlling and signalling devices.

www.elkoep.com/relays

Monitoring/Protection relays

Voltage relays 1-phase and 3-phase (undervoltage, overvoltage, phase failure, phase asymmetry and phase sequence), current relays, level relays, thermostats, light indicator of voltage, power factor and frequency monitoring.

www.elkoep.com/monitoring

iNELS[®] RF Control

Wireless electro-installation iNELS RF

Components of smart wireless system can be easily and quickly used in existing buildings where it is not desirable to cut holes for cables (e.g. add/change a light switch when changing room layouts). However, it is also possible to assemble a complete system for apartment or house control, intelligent control of heating, blinds or scene settings. When using the eLAN-RF gateway, the entire installation can also be controlled by an application from a mobile phone, tablet or television.

www.elkoep.com/wireless

Hotel Wireless Retrofit (HRESK)

Hotel Room Energy Saving Kit - is a complete solution designed primarily for existing hotel rooms and is based on the iNELS RF wireless system. It focuses on the following areas: "Energy savings": switching off all appliances when leaving the room or not overheating/not overcooling, "Comfort" - all out of bed and "Safety": bell, guest in the room, maid, visitor.

www.elkoep.com/retrofit

iNELS[®] BUS System

Wired electro-installation iNELS BUS

The sensors and actuators, together with the central unit, which is the heart of the system, communicate via a 2-wires and enable the built up a larger installation for family houses, villas, hotels and buildings. Individual functions of elements are parameterized in iDM SW, so simple and more complex actions can be set.

www.elkoep.com/wired

Hospitality Hotel (GRMS)

Guest Room Management System – is a comprehensive solution designed primarily for new hotels, guesthouses or wellness and is based on the iNELS BUS system. In the room, it resolves the control of lighting, access, temperature control and audio/video distribution. It features glass panels with touch buttons that can be combined in various ways (numbers, shape, and colours) and customized (description, logo).

www.elkoep.com/hospitality

Building management system

Building Management System is the supervisor above the iNELS BUS, resp. wireless system iNELS RF. It enables not only the control of several central units (CU) or gateways (eLAN), but also the connection to other protocols that the technology brings in the building (Modbus, Bacnet, KNX, etc.).

www.elkoep.com/building

Lighting control

iNELS offer a variety of lighting control solutions for all types of light sources: from simple (dimmers from the RELAY range), through wireless (iNELS RF) to sophisticated control within the iNELS BUS installation, which (except conventional R - L - C - LED dimmers) also includes units for light control via DALI and DMX bus.

LOGUS⁹⁰

Switches and sockets

Switches, sockets and a complete range of devices and accessories - this is the Logus90 series from the Portuguese manufacturer Efael. This range is complemented by both standard plastic frames and luxury frames made of purely natural materials: real wood, metal, granite or tempered glass. Be exceptional!

www.elkoep.com/logus90

Innovation of single-function time relays CRM-81J and CRM-83J

We have recently added a **rotary switch to set the time range on the front panel**, thus unifying several variants into one type. This allowed us to extend the time range up to a **maximum of 100h** instead of the original **10h**. Functions controlled by the supply voltage connection now have the **possibility to inhibit the ongoing delay** by applying voltage via the control input. Another visible change in this year's news, incl. one-function is the **transition to a new design of 1-MODULE boxes**, which brings easier installation on a DIN rail and higher resistance to vibrations thanks to a reinforced spring on the latch. You can find them under the new type designations **CRM-181J** and **CRM-183J**.

Staircase switch CRM-4 and CRM-46

Automatic stair switch, are used for delayed switching off of lighting in stairs, corridors and other areas, including the possibility of delayed deceleration of fans, they have undergone innovations, both in terms of vision and parameters. The innovation brings several parameter improvements:

- ♦ increase of the possible **load of the control buttons to 100 mA**
- ♦ signaling of an ongoing delay on the product
- ♦ possibility to **switch off the load before the set delay has elapsed**
- ♦ replacing the slide switch with a rotary switch

The original CRM-42 and CRM-42/F are now replaced by a new product with the type designation **CRM-46**. It combines the functions of the two previous models and also adds two new ones:

- ♦ function of impulse relay and impulse relay with delay

Timing relays on DIN rail and for PLUG-IN

New types of time relays have an extended time range of **0.05 s - 30 days**.

Available only with universal supply voltage **12 - 240V AC/DC**. Offers innovated **functions** you know from the CRM-91H, including some brand **new ones**.

The relay with multiple output contacts has option to set the **mode of second ev. third contact** thanks to the added rotary potentiometer on the product panel. Relays with only one output contact have the function of **MEMORY LATCH with delay** instead of a output mode. **We divide individual types according to control inputs:**

On DIN rail:

CRM-111H, CRM-113H - commonly used **voltage-dependent input**, which you know from CRM-91H/93H CRM-121H - **galvanically separated control input**, allowing to control functions by independent external voltage

CRM-131H - **three voltage-dependent inputs** (START, INHIBIT, RESET) for advanced function control

The socket:

PTRM-216KP and PTRM-216TP - commonly used **voltage-dependent input**, which you know from PRM-91H/92H PTRM-216K and PTRM-216T - **potential-free input**, for control of functions without voltage PTRM-216K and PTRM-216T - **three voltage-dependent inputs** (START, INHIBIT, RESET) for advanced function control.

A knob (**K**) or a potentiometer (**T**) can be selected to fine-tune the delay.

	DESIGN	
TIME RELAYS - MULTIFUNCTION		
CRM-161 Multifunction time relay - economy version (CRM-61 INNOVATION)	(1-MODULE)	12

Multifunction

CRM-161

6 functions, 6 time range 1x 8 A switch, power supply AC 24-240 V, DC 24 V, economy version of CRM-91H. page 12

CRM-91H

10 functions, 10 time ranges, 1x output 16 A changeover/SPDT, multivoltage or 230 V supply. page 13

CRM-93H

As CRM-91H, but output 3x 8 A changeover/SPDT. page 13

CRM-91HE

As CRM-91H but with time setting by external potentiometer (for frequent setting). page 14

CRM-101

Relay for the automatic switching on and off of electricity in rooms, using connected sensors (motion detector and magnetic door contact). page 16

CRM-111H

11 functions 10 time ranges, output contact: 1x switch 16 A. page 18

CRM-113H

10 functions, 10 time ranges, output contact: 1x 16 A + 2x 8 A switches, relay mode selection. page 18

CRM-121H

As CRM-111H, but with galvanically separated input. page 20

CRM-131H

11 functions, 10 time ranges, output contact: 1x switch 16 A, three control inputs. page 22

CRM-82TO

"True OFF" relay - delay off without supply, for backup circuits. page 24

Singlefunction, special

CRM-2T

Star/delta timer relay page 25

CRM-181J

Variants of 4 functions with time range 0.1s - 100 h, output 1x 16 A switch., UNI power supply. page 26

CRM-183J

As CRM-181J, but output 1x16A + 2x 8 A switch. page 26

CRM-2H

Asymmetric cycler, independent time setting ON/OFF. page 28

CRM-2HE

As CRM-2H, but time setting by external potentiometers (for frequent setting). page 29

SJR-2

2x delay on, gradual switching of high loads. page 30

PLUG-IN

PTRM-216TP

10 functions, 10 time ranges, output contact: 2x switches 16 A, voltage dependent input, mode selection of output contact, tuning with dials. page 31

PTRM-216KP

As PTRM-216TP, but fine tuning using a knob. page 31

PTRM-216T

10 functions, 10 time ranges, output contact: 2x changeover 16 A, potential-free input, mode selection of output contact, dial tuning. page 32

PTRM-216K

As PTRM-216T, but fine tuning using a knob. page 32

PTRM-216T

10 function, 10 time ranges, output contact 2x switches 16 A, three control inputs and mode selection of output contact, tuning with dials. page 33

PTRM-216K

As PTRM-216T, but fine tuning help with a knob. page 33

Digital

CRM-100

17 functions, time range 0.1 s - 999 hours, 1x 8 A changeover contact, power supply 24-240 V AC/DC. page 34

PDR-2A

4 digit display, 16 functions, 2 independent times 0.01s-100 hrs, 2 outputs 16 A changeover/SPDT START/STOP inputs. page 36

PDR-2B

As PDR-2A, but 10 functions for each output and time - meaning two relays in one device. page 36

Staircase switches

CRM-46

Time 0.5 - 10 min, automatic with the possibility of warning before switching off and extending the set delay when the button presses. page 38

CRM-4

Basic version, time 0.5-10 min, output contact 16 A, anti-blocking function. page 40

DIM-2

With dimming, setting: dim-up/shining/dim-down brightness only for el. bulbs output up to 500 VA. page 78

In the installation box

SMR-K

Super multifunction relay for installation into an installation box, 3 wire connection (without neutral). Input: can be connected in parallel with LED energy saving light bulb or fluorescent lamp. page 42

SMR-T

Super multifunction relay for installation into a wiring box, 3 wire connection (without neutral). page 42

SMR-H

As SMR-T, but 4 wire connection, output - triac 0-200 VA, 9 functions including function of memory relay. page 42

SMR-B

As SMR-H, but output relay contact 16 A (possibility to switch also fluorescent lights and LED). page 42

Accessories

CRM-91HE, 2HE

Potentiometer

Potentiometer - external control unit for CRM-2HE and CRM-91HE, mounting into a switchboard, max. connection length 10 m. (32.8 ft.). EAN code: 8595188125215

PLUG-IN

Socket ES11

11-PIN octal socket Max. Current: 10 A Weight: 60 g (2.1 oz.) Mounting on DIN rail. EAN code: 8595188129879

1-MODULE

Comb busbar CB-17-8

Serves for mass connection of up to eight power supply contacts A1 and A2, it is suitable for all relays with width of 17.5 mm (0.69") (1-MODULE) Pack of 10 pcs. EAN code: 8598188181892

EAN code
CRM-161: 8595188181617

Technical parameters

CRM-161

Power supply

Supply terminals:	A1 - A2
Voltage range:	AC 24 - 240 V (AC 50/60 Hz) and DC 24 V
Power input (max.):	2 VA/1.5 W
Supply voltage tolerance:	-15 %; +10 %
Supply indication:	green LED

Time circuit

Number of functions:	6
Time ranges:	0.1 s - 10 hrs
Time setting:	rotary switch and potentiometer
Time deviation:	5 % - mechanical setting
Repeat accuracy:	0.2 % - set value stability
Temperature coefficient:	0.01 %/°C, at = 20 °C (0.01 %/°F, at = 68 °F)

Output

Number of contacts:	1x changeover/SPDT (AgNi)
Current rating:	8 A/AC1
Breaking capacity:	2000 VA/AC1, 192 W/DC
Switching voltage:	250V AC/24V DC
Max. power dissipation:	0.6 W
Output indication:	multifunction red LED
Mechanical life:	10.000.000 operations
Electrical life (AC1):	50.000 operations

Control

Control. terminals:	A1-S
Load between S-A2:	Yes
Impulse length:	min. 25 ms/max. unlimited
Reset time:	max. 150 ms

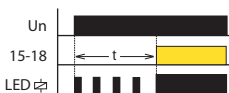

Other information

Operating temperature:	-20 °C to +55 °C (-4 °F to 131 °F)
Storage temperature:	-30 °C to +70 °C (-22 °F to 158 °F)
Dielectrical strength:	4kV AC (supply - output)
Operating position:	any
Mounting:	DIN rail EN 60715
Protection degree:	IP40 from front panel/IP20 terminals
Overvoltage category:	III.
Pollution degree:	2
Max. cable size (mm ²):	solid wire max. 1x 2.5 or 2x 1.5/ with sleeve max. 1x 2.5 (AWG 12)
Dimensions:	90 x 17.6 x 64 mm (3.5" x 0.7" x 2.5")
Weight:	62 g (2.2 oz.)
Standards:	EN 61812-1

Indication of operating states

Examples of signaling

Function a

Function e

- Multifunction economy version of time relay for universal use in automation, control and regulation or in house installations.
- Universal supply voltage: AC 24 – 240 V (AC 50/60 Hz) and DC 24V.
- Comfortable and well-arranged function and time-range setting by rotary switches.
- Time scale 0.1 s - 10 hrs divided into 6 ranges: (0.1 s - 1 s/1 s - 10 s/0.1 min - 1 min/1 min - 10 min/0.1 hrs - 1 h/1 h - 10 hrs).
- Output contact: 1x changeover/SPDT 8 A.
- Multifunction red LED flashes or shines depending on the operating status.

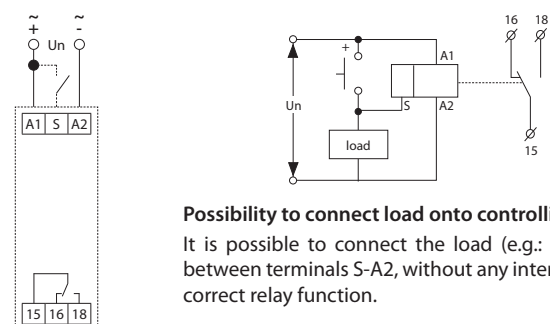

Description

Functions

Connection

Possibility to connect load onto controlling input
It is possible to connect the load (e.g.: contactor) between terminals S-A2, without any interruption of correct relay function.

output 1 - output 2	x	1kV AC
output 2 - output 3	x	1kV AC
Operating position:	any	
Mounting:	DIN rail EN 60715	
Protection degree:	IP40 from front panel/IP20 terminals	
Overvoltage category:	III.	
Pollution degree:	2	
Max. cable size (mm ²):	solid wire max. 1x 2.5 or 2x 1.5/ with sleeve max. 1x 2.5 (AWG 12)	
Dimensions:	90 x 17.6 x 64 mm (3.5" x 0.7" x 2.5")	
Weight:	UNI - 62 g (2.2 oz.); 230 - 57 g (2 oz.)	UNI - 85 g (3oz.); 230 - 80 g (2.8 oz.)
Standards:	EN 61812-1	

- Multifunction time relay for universal use in automation, control and regulation or in house installations.
- Comfortable and well-arranged function and time-range setting by rotary switches.
- Multifunction red LED flashes or shines depending on the operating status.

Description

Connection

CRM-93H:
 The potential difference between the supply terminals (A1-A2), output contact 2 (25-26-28) and output contact 3 (35-36-38) must be a maximum of 250V AC rms/DC.

Possibility to connect load onto controlling input

It is possible to connect the load (e.g.: contactor) between terminals S-A2, without any interruption of correct relay function.

Indication of operating states

Examples of signaling

Glow-tubes:	No
Control. terminals:	A1-S
Impulse length:	min. 25 ms/max. unlimited
Reset time:	max. 150 ms
Other information	
Operating temperature:	-20 °C to +55 °C (-4 °F to 131 °F)
Storage temperature:	-30 °C to +70 °C (-22 °F to 158 °F)
Electrical strength:	4 kV (supply - output)
Operating position:	any
Mounting:	DIN rail EN 60715
Protection degree:	IP40 from front panel/IP20 terminals
Overvoltage category:	III.
Pollution degree:	2
Max. cable size (mm ²):	solid wire max. 1x 2.5 or 2x 1.5/ with sleeve max. 1x 2.5 (AWG 12)
Dimensions:	90 x 17.6 x 64 mm (3.5" x 0.7" x 2.5")
Weight:	75 g (2.6 oz.)
Standards:	EN 61812-1

Technical parameters	Potentiometer
Potentiometer:	47 kΩ, linear
Protection degree:	IP 65 from front side/IP20 from back side
Max. cable size (mm ²):	1.5 with sleeve/without sleeve max. 2.5 (AWG 12)
Weight:	22 g (0.8 oz.)
Dimensions:	see page Accessories

- Control by external control unit - potentiometer (can be placed/mounted for example on switch board doors or in panel).
- 10 functions:
 - 5 time functions controlled by supply voltage
 - 4 time functions controlled by control input
 - 1 function of latching relay.
- Possible to connect external potentiometer - max. distance 10 m (32.8 ft.) from relay.

Description

Connection

Function

For a description of the functions on page 15

Function

ON DELAY
When the input voltage U is applied, timing delay t begins. Relay contacts R change state after time delay is complete. Contacts R return to their shelf state when input voltage U is removed. Trigger switch is not used in this function.

INTERVAL ON
When input voltage U is applied, relay contacts R change state immediately and timing cycle begins. When time delay is complete, contacts return to shelf state. When input voltage U is removed, contacts will also return to their shelfstate. Trigger switch is not used in this function.

FLASHER - OFF first
When input voltage U is applied, time delay t begins. When time delay t is complete, relay contacts R change state for time delay t. This cycle will repeat until input voltage U is removed. Trigger switch is not used in this function.

FLASHER - ON first
When input voltage U is applied, relay contacts R change state immediately and time delay t begins. When time delay t is complete, contacts return to their shelf state for time delay t. This cycle will repeat until input voltage U is removed. Trigger switch is not used in this function.

OFF DELAY
Input voltage U must be applied continuously. When trigger switch S is closed, relay contacts R change state. When trigger switch S is opened, delay t begins. When delay t is complete, contacts R return to their shelf state. If trigger switch S is closed before time delay t is complete, then time is reset. When trigger switch S is opened, the delay begins again, and relay contacts R remain in their energized state. If input voltage U is removed, relay contacts R return to their shelf state.

SINGLE SHOT
Upon application of input voltage U, the relay is ready to accept trigger signal S. Upon application of the trigger signal S, the relay contacts R transfer and the preset time t begins. During time-out, the trigger signal S is ignored. The relay resets by applying the trigger switch S when the relay is not energized.

SINGLE SHOT falling edge
Upon application of input voltage U, the relay is ready to accept trigger signal S. Upon application of the trigger signal S, the relay contacts R transfer and the preset time t begins. At the end of the preset time t, the relay contacts R return to their normal condition unless the trigger switch S is opened and closed prior to time out t (before preset time elapses). Continuous cycling of the trigger switch S at a rate faster than the preset time will cause the relay contacts R to remain closed. If input voltage U is removed, relay contacts R return to their shelf state.

ON/OFF DELAY
Input voltage U must be applied continuously. When trigger switch S is closed, time delay t begins. When time delay t is complete, relay contacts R change state and remain transferred until trigger switch S is opened. If input voltage U is removed, relay contacts R return to their shelf state.

MEMORY LATCH
Input voltage U must be applied continuously. Output changes state with every trigger switch S closure. If input voltage U is removed, relay contacts R return to their shelf state.

PULSE GENERATOR 0.5 s
Upon application of input voltage U, a single output pulse of 0.5 seconds is delivered to relay after time delay t. Power must be removed and reapplied to repeat pulse. Trigger switch is not used in this function.

Operating position:	any
Mounting:	DIN rail EN 60715
Protection degree:	IP40 from front panel/IP20 terminals
Overvoltage category:	III.
Pollution degree:	2
Max. cable size (mm ²):	solid wire max. 1x 2.5 or 2x 1.5/ with sleeve max. 1x 2.5 (AWG 12)
Dimensions:	90 x 17.6 x 64 mm (3.5" x 0.7" x 2.5")
Weight:	70 g (2.5 oz.)
Standards:	EN 61812-1

- Time relay for automatic switching ON and OFF of electricity in hotel rooms, with the help of connected sensors (replacement of common card switches).
- 2 control inputs - **potential-free contacts**:
IN1 (MD) - motion detector
IN2 (MC) - magnetic door contact.
- Adjustable configuration of control inputs:
NO - normally open/NC - normally closed, according to the type of connected sensors).
- Time delay t1 (delayed switch-off of electricity).
Adjustable in the range of 1 - 60 min in minute steps.
- Time delay t2 (input blocking for motion detector).
Adjustable continuously in the range 0.5 - 10 s.
- The multifunction red LED flashes or lights up depending on the operating status.

Description

Setting of control inputs configuration

MODE	IN1	IN2
1	NO	NO
2	NO	NC
3	NC	NO
4	NC	NC

Example settings:

- door contact is NC (closed when the door is closed)
- motion detector has NC contact (closed at rest, opens when motion is detected)
- MODE must be set to position 4

Connection

Do not apply voltage to terminals IN1 and IN2 - the control contacts must be potential-free!

Function

① Arrival of persons in the room

- When people enter the room, IN2 is activated (MC - magnetic door contact)
- closes the relay (turns on the electricity) and at the same time the delay t1 and t2 starts
 - the red LED flashes depending on the delay in progress.
- Contact IN1 (MD - motion detector), responds to the movement of people in the room
- during the delay t2, the MD operation is blocked
 - if IN1 is activated after the delay t2 has elapsed or if the contact IN1 is already closed, the delay t1 ends and the red LED lights up permanently.
- The relay remains permanently closed.

② Person leaving the room

- When the person leaves the room, contact IN2 is activated
- delays t1 and t2 start at the same time
 - if there is a movement in the room after the delay t2 has elapsed, IN1 is activated, the delay t1 is terminated and the relay remains closed

③ Last person leaving the room

- When the person leaves the room, contact IN2 is activated
- delays t1 and t2 start at the same time
 - if IN1 is not activated after the delay t2 has elapsed (there is no movement in the room), then after the delay t1 the red LED goes out and the relay opens (switches off the electricity).

④ No movement after delay t2

- When people enter the room, IN2 is activated (MC - magnetic door contact)
- closes the relay (turns on the electricity) and at the same time the delay t1 and t2 starts
 - if IN1 is not activated after the delay t2 has elapsed (e.g. a brief insight into the room), then after the delay t1 the red LED goes out and the relay opens (switches off the electricity).

⑤ Movement at rest

- Idle state - in case the IN1 does not activate the relay (switches off the electricity) after the person leaves the room after the delay t2 has elapsed. However, another person remains in the room motionless (e.g. sleeping).
- if IN1 is activated (e.g. by waking up a sleeping person), the relay closes without delay (turns on the electricity).

Mode selection

FUNC. Settings function mode

The desired function a-j is set with the FUNC rotary switch.

OFF. Output contact open mode

ON. Output contact closed mode

k. Function: MEMORY LATCH with delay

When the supply voltage is applied, the relay is open. If the control contact is closed, the relay closes and the time delay T starts. It does not matter the length of the control pulse. When the timing is complete, the relay opens. If the control contact is closed during timing, the relay opens immediately. Each time the control contact closes during relay timing, it changes status.

Function

a. ON DELAY

When the supply voltage is applied, the time delay T begins. When the timing is complete, the relay closes and this condition continues until the supply voltage is disconnected.

ON DELAY with Inhibit

If the control contact is closed and the supply voltage is connected, the relay is opened and timing does not start until the control contact opens. When the timing is complete, the relay closes. If the control contact is closed during timing, the timing is interrupted and continues only after the control contact opens.

b. INTERVAL ON

After supply voltage relay closes and starts the delay time T. After the end of the timing relay opens and this state lasts until the supply voltage is disconnected.

INTERVAL ON with Inhibit

If the control contact is closed and the supply voltage is connected, the relay will close and the timing will start only after the control contact has been opened. When the timing is complete, the relay opens. If the control contact is closed during timing, the timing is interrupted and continues only after the control contact opens.

c. FLASHER - ON first

After supply voltage relay closes and starts the delay time T. After the end of the timing relay opens and again runs delay time T. When the timing is complete, the relay closes again and the sequence is repeated until the supply voltage is disconnected. If the control contact is closed during timing, this does not affect the operation of the cycler.

FLASHER - OFF first

If the control contact is closed during timing; this does not affect the operation of the cycler. If the control contact is closed and the supply voltage is connected, the cycler starts with a pause (relay open).

d. MEMORY LATCH

When the supply voltage is applied, the relay is open. When the control contact is closed, the relay closes. When the supply voltage is disconnected, the status does not change when the control contact is opened. When the control contact is closed again, the relay opens. Each time the control contact is closed, the relay changes status.

e. OFF DELAY

When the supply voltage is applied, the relay is open. When the control contact is closed, the relay closes. When the control contact opens, the time delay T begins. If the control contact is closed during timing, the time is reset and the relay remains closed. When the control contact opens, the time delay T starts again and opens when the relay closes.

f. SINGLE SHOT

When the supply voltage is applied, the relay is open. When the control contact is closed, the relay closes and the time delay T begins. Closing the control contact during timing is ignored.

g. WATCHDOG

When the supply voltage is applied, the relay is open. When the control contact is closed, the relay closes and the time delay T begins. Closing the control contact during timing triggers a new time delay T - the relay closing time is thus increased.

h. PULSE GENERATOR 0.5 s

After the supply voltage has been applied, the time delay T begins. When the timing is complete, the relay closes for a fixed time (0.5 s).

PULSE GENERATOR 0.5 s with Inhibit

After supply voltage starts the time delay T. By closing timing of the control contact during timing is suspended. When the control contact opens, the time interval is completed and the relay closes for a fixed time (0.5 s).

i. INTERVAL ON/OFF

When the supply voltage is applied, the relay is open. When the control contact is closed, the relay closes and the time delay T begins. When the control contact is opened, the relay remains closed for 2T. When the timing is complete, the relay opens. Any other change of control contact status during timing is ignored.

j. ON/OFF DELAY

When the supply voltage is applied, the relay is open. If control contact is closed, time delay T starts. When the control contact is opened, a new time delay T begins. If the control contact is open during timing, the relay closes at the end of the timing and opens the relay after the new time delay. Any other change of control contact status during timing is ignored.

- Multifunction time relay for universal use in automation, control and regulation or in house installations.
- Three control inputs - START, INHIBIT, RESET.
- Mode selection - according to the set function, permanently closed, permanently open, function of MEMORY LATCH with delay.
- Multifunction red LED flashes or shines depending on the operating status.

Description

Supply terminals
(A1 - A2)

Connection

Indication of operating states

Mode selection

FUNC. Settings function mode

The desired function a-j is set with the FUNC rotary switch.

OFF. Output contact open mode

ON. Output contact closed mode

k. MEMORY LATCH with delay

When the supply voltage is applied, the relay is open. If the START control contact is closed, the relay closes and the time delay T starts. It does not matter the length of the control pulse. When the timing is complete, the relay opens. If the START control contact is closed during timing, the relay opens immediately. Each time the control contact is closed during relay timing, it changes status. Closing the INHIBIT control contact pauses the timing, after opening the INHIBIT control contact the timing continues from the moment of interruption. Closing the RESET control contact immediately ends the timing and the relay opens, just like as when the supply voltage is disconnected.

Function

Control input function description:

- Contact START starts the time function
- INHIBIT contact pauses timing (pause)
- The RESET contact simulates switching the supply voltage on and off

Same for all features:

- If the control contact START is closed and the supply voltage is connected, the time function is activated when the supply voltage is connected.
- Closing the control contact INHIBIT pauses the timing, after opening the control contact INHIBIT timing continues from the moment of interruption.
- If the INHIBIT control contact is closed, the START control contact is activated and the timing is paused.
- Closing the control contact RESET immediately terminates the timing and the relay opens, just as when the supply voltage is disconnected.
- If the control contact RESET is closed and then the control contact START is closed, the time function is activated when the control contact RESET is opened as well as when the supply voltage is connected.

a. ON DELAY with Control Signal

When the supply voltage is applied, the relay is open. If the control contact START is closed, the time delay T starts. The closing of the START control contact during timing is ignored.

b. INTERVAL ON with Control Signal

When the supply voltage is applied, the relay is open. When the control contact START is closed, the relay closes and the time delay T begins. If the START control contact is open during timing, the time interval is immediately terminated and the relay opens.

c. FLASHER - ON first with Control Signal

When the supply voltage is applied, the relay is open. When the START control contact is closed, the relay energizes and starts the delay time T. After the end of the timing relay opens and again runs delay time T. Upon completion timing again switches, and the sequence is repeated until the supply voltage is disconnected.

d. FLASHER - OFF first with Control Signal

When the supply voltage is applied, the relay is open. When the START control contact is closed, starts the time delay T. After the end of the timing relay closes and again runs delay time T. After the end of the timing relay opens and the sequence is repeated until the supply voltage is disconnected.

e. OFF DELAY

When the supply voltage is applied, the relay is open. If the control contact START is closed, the relay closes. After tripping Contact Start starts the delay time T. After the end of the timing relay is switched off.

f. SINGLE SHOT

When the supply voltage is applied, the relay is open. When the START control contact is closed, the relay energizes and starts the delay time T. After the end of the timing relay is switched off. The closing of the START control contact during timing is ignored.

g. WATCHDOG

When the supply voltage is applied, the relay is open. When the START control contact is closed, the relay energizes and starts the delay time T. After the end of the timing relay is switched off. Closing control contact START during timing triggers a new time delay T - the relay closing time is thus increased.

h. PULSE GENERATOR 0.5 s with Control Signal

When the supply voltage is applied, the relay is open. When the START control contact is closed, starts the time delay T. After the end of the timing relay switches for the fixed time (0.5 sec).

i. INTERVAL ON/OFF

When the supply voltage is applied, the relay is open. When the START control contact is closed, the relay energizes and starts the delay time T. After the end of the timing relay is switched off. By opening the control contact start relay again closes and starts the delay time T. After the end of the timing relay is switched off.

If the START control contact is open during timing, a restart occurs - the relay remains closed and a new time delay T begins. When the timing is complete, the relay opens.

j. ON/OFF DELAY

When the supply voltage is applied, the relay is open. When the START control contact is closed, starts the time delay T. After the end of the timing relay switches. Opening the control contact START starts a new time delay T. When the timing is complete, the relay opens.

If the START control contact is open during timing, a restart occurs - the relay closes and a new time delay T begins. When the timing is complete, the relay opens.

EAN code
CRM-82TO/UNI: 8595188137614

Technical parameters		CRM-82TO
Number of functions:	a - On Delay (Power On)/ e - Off Delay (S Break)	
Supply terminals:	A1 - A2	
Voltage range:	AC/DC 12 - 240 V (AC 50/60 Hz)	
Burden (max.):	AC 0.7 - 3 VA/DC 0.5 - 1.7 W	
Max. dissipated power (Un + terminals):	2.5 W	
Supply voltage tolerance:	-15 %; +10 %	
Supply indication:	green LED	
Time ranges:	0.1 s - 10 min	
Time setting:	potentiometer	
Time deviation:	5 % - mechanical setting	
Repeat accuracy:	0.2 % - set value stability	
Temperature coefficient:	0.1 %/°C, at = 20 °C (0.1 %/°F, at = 68 °F)	
Output		
Number of contacts:	2x changeover/DPDT (AgNi/Silver Alloy)	
Current rating:	8 A/AC1	
Breaking capacity:	2000 VA/AC1, 192 W/DC	
Inrush current:	10 A/<3 s	
Switching voltage:	250V AC/24V DC	
Output indication:	red LED	
Mechanical life:	30.000.000 operations	
Electrical life (AC1):	70.000 operations	
Other information		
Operating temperature:	-20 °C to 55 °C (-4 °F to 131 °F)	
Storage temperature:	-30 °C to 70 °C (-22 °F to 158 °F)	
Electrical strength:	4 kV (supply-output)	
Operating position:	any	
Mounting:	DIN rail EN 60715	
Protection degree:	IP40 from front panel/IP10 terminals	
Overvoltage category:	III.	
Pollution degree:	2	
Max. cable size (mm ²):	solid wire max. 2x 2.5 or 1x 4, with sleeve max. 2x 1.5 or 1x 2.5 (AWG 12)	
Dimensions:	90 x 17.6 x 64 mm (3.5" x 0.7" x 2.5")	
Weight:	73 g (2.6 oz.)	
Standards:	EN 61812-1	

Symbol

- „True OFF“ relay - relay timing without supply voltage.
- Example of use: back-up source for Delay OFF in case of voltage failure (e.g. emergency lighting, emergency respirator, or protection of el. controlled doors - in case of fire).
- 2 time functions adjustable by rotary switch:
a - delayed return after disconnecting of supply
e - delayed start.
- Time range (adjustable by rotary switch and fine setting by potentiometer): 0.1 s - 10 min.
- Interruptions in the power supply must take time steps (tens to hundreds of milliseconds).
- Output status indicated by red LED (only in case of supply voltage connection).

Description

Function

- a - Delay OFF (S break) the power supply is switched off (min. time is 0.5 s) e - On Delay (S break)

- Singlefunction time relays are suitable for applications where there is a clear function requirement in advance and are suitable for universal use in automation, control and regulation or in house installations.
- Choice of four types: ZR, ZN, BL, OD.
- All functions initiated by the supply voltage can use the control input to inhibit the ongoing delay (pause).
- Multifunction red LED flashes or shines depending on the operating status.

Description

CRM-183J

Connection

CRM-181J

CRM-183J

CRM-183J:
 The potential difference between the supply terminals (A1-A2), output contact 2 (25-26-28) and output contact 3 (35-36-38) must be a maximum of 250V AC rms/DC.

Possibility to connect load onto controlling input

It is possible to connect the load (e.g.: contactor) between terminals S-A2, without any interruption of correct relay function.

Indication of operating states

Function

ZR: ON DELAY

When the supply voltage is applied, the time delay T begins. When the timing is complete, the relay closes and this condition continues until the supply voltage is disconnected.

BL: FLASHER - ON first

If the control contact is closed and the supply voltage is connected, the relay will close and the timing will start only after the control contact has been opened. When the timing is complete, the relay opens.

ON DELAY with Inhibit

If the control contact is closed and the supply voltage is connected, the relay is opened and timing does not start until the control contact opens. When the timing is complete, the relay closes. If the control contact is closed during timing, the timing is interrupted and continues only after the control contact opens.

FLASHER - ON first with Inhibit

If the control contact is closed during an active timer setting, the timing is interrupted and continues only after the control contact opens again.

ZN: INTERVAL ON

After supply voltage relay closes and starts the delay time T. After the end of the timing relay opens and this state lasts until the supply voltage is disconnected.

OD: OFF DELAY

When the supply voltage is applied, the relay is open. When the control contact is closed, the relay closes. When the control contact opens, the time delay T begins. If the control contact is closed during timing, the time is reset and the relay remains closed. When the control contact opens, the time delay T starts again and opens when the relay closes.

INTERVAL ON with Inhibit

If the control contact is closed and the supply voltage is connected, the relay will close and the timing will start only after the control contact has been opened. When the timing is complete, the relay opens. If the control contact is closed during timing, the timing is interrupted and continues only after the control contact opens.

Note: ZR, ZN and BL functions are initiated by connecting the supply voltage to the product, i.e. In the event of a failure and recovery of the supply voltage, the relay automatically performs 1 cycle.

Function

For a description of the functions on page 21.

- Multifunction time relay for universal use in automation, control and regulation or in house installations.
- Possibility to select the control element for fine time setting:
PTRM-216KP - knob, for easy handling without the need for tools
PTRM-216TP - rotary switch, for the possibility of using a sealable cover.
- All functions initiated by the supply voltage, except for the flasher function, can use the control input to inhibit the delay (pause).
- Mode selection - according to the set function, permanently closed, permanently open, and switching of the second output contact according to the supply voltage.
- Multifunction red LED flashes or shines depending on the operating status.

Description

Connection **Indication of operating states**

Pins 2 and 5 are internally connected.

Mode selection

FUNC. Settings function mode
 The desired function a-j is set with the FUNC rotary switch.

OFF. Output contact open mode

ON. Output contact closed mode

INST. Second output contact instantaneous

The second output contact switches according to the supply voltage. The first output contact switches according to the function (a-j) set by the trimmer FUNC.

PTRM-216K/UNI: 8595188175579

Technical parameters	PTRM-216T	PTRM-216K
Power supply		
Power pins:	2, 10	
Voltage range:	AC/DC 12 – 240V (AC 50/60Hz)	
Power input (max.):	2.5 VA/1.5 W	
Supply voltage tolerance:	±10 %	
Supply indication:	green LED	
Time circuit		
Number of functions:	10	
Time ranges:	50 ms - 30 days	
Time setting:	rotary switch and potentiometer	
Time deviation*:	5 % - mechanical setting	
Repeat accuracy:	0.2 % - set value stability	
Temperature coefficient:	0.01 %/°C, at = 20 °C (0.01 %/°F, at = 68 °F)	
Output		
Number of contacts:	2x changeover/SPDT (AgNi)	
Current rating:	16 A/AC1	
Breaking capacity:	4000 VA/AC1, 384 W/DC	
Switching voltage:	250V AC/24V DC	
Max. power dissipation:	2.4 W	
Output indication:	multifunction red LED	
Mechanical life:	10.000.000 operations	
Electrical life (AC1):	50.000 operations	
Control		
Control pins:	5 - 6	
Impulse length:	min. 25 ms/max. unlimited	
Reset time:	max. 150 ms	
Other information		
Operating temperature:	-20 °C to +55 °C (-4 °F to 131 °F)	
Storage temperature:	-30 °C to +70 °C (-22 °F to 158 °F)	
Dielectrical strength:		
supply - output 1 (1, 3, 4)	2.5 kV AC	
supply - output 2 (8, 9, 11)	2.5 kV AC	
output 1 - output 2	2.5 kV AC	
Operating position:	any	
Mounting:	11 pin octal socket	
Protection degree:	IP40 from front panel	
Overvoltage category:		
for supply voltage 12-150V AC/DC	III.	
for supply voltage 150-240V AC/DC	II.	
Pollution degree:	2	
Dimensions:	48x48x79mm (1.7"x1.7"x3.1")	48x48x89mm (1.7"x1.7"x3.5")
Weight:	111 g (3.9 oz.)	108 g (3.81 oz.)
Standards:	EN 61812-1	

* for adjustable delay <100 ms, a time deviation of ± 10 ms applies

Function

For a description of the functions on page 21.

- Multifunction time relay for universal use in automation, control and regulation or in house installations.
- Potential-free control input (Control Switch Trigger).
- Possibility to select the control element for fine time setting:
- PTRM-216K - knob, for easy handling without the need for tools.
- PTRM-216T - rotary switch, for the possibility of using a sealable cover.
- All functions initiated by the supply voltage, except for the flasher function, can use the control input to inhibit the delay (pause).
- Mode selection - according to the set function, permanently closed, permanently open, and switching of the second output contact according to the supply voltage.
- Multifunction red LED flashes or shines depending on the operating status.

Description

Connection

Do not apply voltage to terminals 5, 6, 7!

Indication of operating states

Mode selection

FUNC. Settings function mode

The desired function a-j is set with the FUNC rotary switch.

OFF. output contact open mode

ON. output contact closed mode

2 INST. Second output contact instantaneous

The second output contact switches according to the supply voltage. The first output contact switches according to the function (a-j) set by the trimmer FUNC.

- Multifunction time relay for universal use in automation, control and regulation or in house installations.
- Three control inputs - START, INHIBIT, RESET.
- Possibility to select the control element for fine time setting:
PTRA-216K - knob, for easy handling without the need for tools
PTRA-216T - rotary switch, for the possibility of using a sealable cover.
- Mode selection - according to the set function, permanently closed, permanently open, and switching of the second output contact according to the supply voltage.
- Universal supply voltage AC/DC 12 – 240 V.
- Multifunction red LED flashes or shines depending on the operating status.

Technical parameters		CRM-100
Number of functions:		17
Supply terminals:		A1 - A2
Voltage range:		AC/DC 24-240 V (50/60 Hz)
Consumption (apparent / loss):		AC max. 1-4 VA/DC max. 1-3 W
Max. dissipated power (Un + terminals):		4 W
Supply voltage tolerance:		-15 %; +10 %
Time ranges:		0.1 s - 999 hrs.
Time setting:		Buttons SET/ADJ
Repeat accuracy:		± 0.5 % - of selected range
Variation in timing due to voltage change:		± 2%
Variation in timing due to temperature change:		± 5%
Output		
Number of contacts:		1x C/O/SPDT (AgNi)
Current rating:		8 A/AC1
Breaking capacity:		2000 VA/AC1, 192 W/DC
Inrush current:		10 A/<3 s
Switching voltage:		250V AC/24V DC
Output indication:		multifunction red LED
Mechanical life:		20.000.000 operations
Electrical life (AC1):		100.000 operations
Controlling		
Control. terminals:		A1-B1
Other information		
Operating temperature:		-10 to +55 °C (14 to 131 °F)
Storage temperature:		-30 to +70 °C (-22 to 158 °F)
Isolation (Between Input and Output):		2.5 kV
Operating position:		any
Mounting:		DIN rail EN 60715
Protection degree:		IP30 from front panel/IP20 terminals
Overvoltage category:		III.
Pollution degree:		2
Max. cable size (mm ²):		solid wire max. 1x 2.5 or 2x 1.5/ with sleeve max. 1x 2.5 (AWG 12)
Dimensions:		85 x 18.2 x 76 mm (3.3" x 0.7" x 2.99")
Weight:		78 g (2.8 oz.)
Standards:		EN 61812-1

- Digital multifunction relay can be used for controlling lights, heating, motors, pumps, machines and appliances where you need set time functions.
- 17 most used functions.
- Thanks to digital display and settings you exact set required time (without any mechanical tolerance).
- Time range 0.1 s - 999 hours.
- Universal power supply 24 - 240 V AC/DC brings you variability of powering.
- Visible time function for non-authorized.

Description

Description of displayed elements on the screen

Connection

Symbol

Function

- 0**

ON delay [7]
Timing commences when supply is present. R energizes at the end of the timing period.

A

Impulse ON/OFF [8]
Permanent supply is required. R energizes for the timing period when B1 is opened or closed. When timing commences, changing state of B1 does not affect R but resets timer.
- 1**

Cyclic OFF/ON {OFF Start, (Sym, Asym)} [7]
T-ON and T-OFF can be same or different. The relay (R) keeps on changing its status till power is removed.

B

Signal OFF/ON [8]
When switch B1 is closed or opened for preset time T, the relay changes its state after time duration T.
- 2**

Cyclic ON/OFF {On Start, (Sym, Asym)} [2]
This function is quite similar to the function '1' but initially the relay(R) is ON for period T-ON after the power is applied.

C

Leading edge impulse1 [4]
A permanent supply is needed. When B1 is closed, output relay energizes until timing irrespective of any further action of B1.
- 3**

Impulse ON energizing [3]
After power ON, R energizes and timing starts. R de-energizes after timing is over.

D

Leading edge impulse2 [7]
Permanent supply is required. when switch B1 is closed, and remains closed output relay energizes until timing is over. If B1 is opened during timing, R resets.
- 4**

Accumulative delay ON signal [4]
Time commences as supply is present and switch B1 is open. Closing switch B1 pauses timing. Timing resumes when switch B1 is opened again. R energizes at the end of timing.

E

Trailing edge impulse1 [E]
Permanent supply required. when B1 is opened, R energizes and de-energizes when timing is over. If B1 is closed during timing R resets.
- 5**

Accumulative delay ON inverted signal [5]
Time commences as supply is present and switch B1 is closed. Opening switch B1 pauses timing. Timing resumes when switch B1 is closed again. R energizes at end of timing.

F

Trailing edge impulse2 [F]
Permanent supply is required. When switch B1 is opened, R energizes and will de-energize when timing is over. If B1 is pulsed during timing period it will have no effect on R.
- 6**

Accumulative impulse ON signal [6]
When supply is ON, R energizes. When switch B1 is closed timing is suspended and remains suspended till switch B1 is opened again. Interrupting supply resets timer.

G

Delayed impulse [6]
When switch B1 is closed, T_{OFF} starts. Relay energizes at the end of T_{OFF} period. Then, T_{OFF} starts irrespective of signal level and relay de-energizes at the end of T_{ON} period.
- 7**

Signal ON delay [7]
Permanent supply required. Timing starts when switch B1 is closed. R energizes at end of timing period and de-energizes when B1 is opened.
- 8**

Inverted signal ON delay [8]
Timing will commence when supply is present and switch B1 is open. R energizes after timing. If B1 is closed during timing period, timing resets to the beginning of cycle.
- 9**

Signal OFF delay [9]
Permanent supply is required. R energizes when switch B1 is closed. Timing commences after S is opened and then the relay de-energizes.

Standards:	EN 61812-1	

- Multifunction programmable digital relay with 4 digit red LED display.
- Control and setting are done by 3 buttons, user-friendly menu, absolute accuracy in timer setting, time countdown on a display, galvanically separated START and STOP control inputs with UNI supply.
- Thanks to its complexity, it is possible to program also more demanding time functions by using 2 independent times.
- 2 independent times, with combination of 2 inputs and 2 outputs.
- PDR-2/A: 16 functions, choice of functions of the other relay, 30 memory places for most frequently used times.
- PDR-2/B: 10 functions, 1 output of 10 functions can be assigned to each relay = 2 relays in one device.
- 2 independent times in range: 0.01 s - 100 hrs.

Protection degree:		IP40 from front panel/IP10 terminals
Overvoltage category:		III.
Pollution degree:		2
Max. cable size (mm ²):		solid wire max. 2x 2.5 or 1x 4 / with sleeve max. 1x 2.5 or 2x 1.5, (AWG 12)
Dimensions:		90 x 17.6 x 64 mm (3.5" x 0.7" x 2.5")
Weight:		56 g (2 oz.)
Standards:		EN 61812-1

* For higher loads and frequent switching, it is recommended to strengthen the relay contact with a power contactor, e.g. the VSxxx contactor.

- Staircase switch enables delayed switching off of lighting on stairs, corridors, entrances, common areas or for delayed running of fans in the toilet or bathroom.
- The intelligent staircase switch offers similar application possibilities as the CRM-4, while it is possible to extend the delay for functions a, b repeatedly by briefly pressing the control button (s). Each short press multiplies the time set by the potentiometer, i.e. setting the potentiometer to 2 minutes with three presses extends the delay up to 6 minutes. The maximum value of such an extended delay will always be 30 minutes, regardless of the number of presses.
- Long press (>2 s) can switch off the output prematurely and end the on-going delay.
- Control input with the possibility of loading up to 100 mA load (glim lamp, LED in the button, etc.).
- Function (selectable by potentiometer on the front panel)
 - a – STAIRCASE SWITCH, programmable with signalization
 - b – STAIRCASE SWITCH, programmable without signalization
 - c – MEMORY LATCH (press to switch on, press to switch off)
 - d – MEMORY LATCH with delay
- ON (permanently closed) - e.g. during cleaning, moving
- OFF (permanently open) - e.g. when replacing luminaires.
- Adjustable time range 0.5 to 10 minutes.
- Handles surge currents up to 80 A.
- 3-wire or 4-wire connection (input S can be controlled by potential A1 or A2).

Description

Circuit connection

3-wire connection

4-wire connection

Function

When switching between functions, the red LED flashes.

STAIRCASE SWITCH, programmable with signalization

The device times the set time, 30 and 40s before the end of the time by double flashing of the luminaire announces the impending switch-off. You can increase the time interval by briefly pressing the button repeatedly. Suitable for resistive loads (e.g. bulbs).

STAIRCASE SWITCH, programmable without signalization

The device will time the set time without flashing at the end of the interval. You can increase the time interval by briefly pressing the button repeatedly. The function is suitable for loads that can withstand frequent switching on and off (eg energy saving lamps, LED bulbs).

MEMORY LATCH (press to switch on, press to switch off)

By pressing the button the output relay closes and by pressing again the relay opens. This function is primarily intended for locations where long-term lighting (without timing) is desirable and the unit is controlled from multiple locations (e.g. in office buildings).

MEMORY LATCH with delay

Pressing the button switches the output on/off. If the output is not turned off during the set time "t", it turns off automatically after the timer. This function is suitable for places where lighting is often forgotten (e.g. toilets, corridors, cellars).

- Simple staircase switch used to control lighting in corridors, halls, staircases, common areas.
- Can also be used for delayed fan run-out e.g. in bathrooms, toilets, ...
- 3 functions:
 - ON (permanently closed) - e.g. when cleaning, moving
 - AUTO - STAIRCASE SWITCH without signalization
 - OFF (permanently open) - e.g. when replacing lights.
- Adjustable time range 0.5 to 10 minutes.
- Timing can be terminated by long pressing the control button (>2s).
- Possibility to connect control buttons with glow lamps (max. 100mA).
- Handles surge currents up to 80 A.
- 3-wire or 4-wire connection (input S can be controlled by potential A1 or A2).

Description

Circuit connection

3-wire connection

4-wire connection

Function

When switching between functions, the red LED flashes.

AUTO - STAIRCASE SWITCH without signalization

By briefly pressing the control button, the device times the set time. You cannot extend the time interval by briefly pressing the button repeatedly. Function suitable for resistive loads (e.g. bulbs) and loads that do not tolerate frequent switching on and off (e.g. energy saving lamps).

Notice:

- After the supply voltage has been connected, the device always performs 1 time cycle.
- The control input reacts to the potential of terminals A1 and A2.

Fuse:	F 1 A/250 V		x	
Connection wires (cross-section/length):	3x CY, 0.75 mm ² (AWG 18) 90 mm (3.5")		4x sol. wir., 0.75 mm ² (AWG 18) 90 mm (3.5")	
Glow-lamps in control button:	x		max. 10	
Dimensions:	49 x 49 x 13 mm (1.9" x 1.9" x 0.5")		49 x 49 x 21 mm (1.9" x 1.9" x 0.8")	
Weight:	27 g(0.95 oz.)		28 g(0.98 oz.)	
Standards:	EN 61812-1			

* for more information see page 75

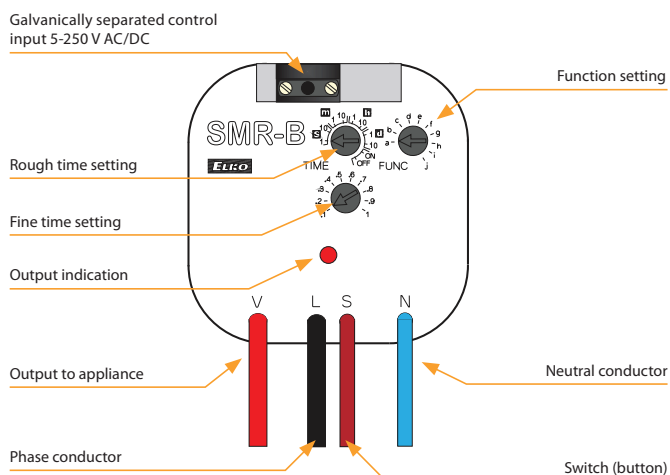

- Multifunction relay designed for installation into a wiring box or under wall-switch in an existing electrical installation.
- Advantageous and fast solution for exchanging standard wall-switch for a switch controlled by time or for an impulse relay controlled by a button.
- **SMR-K**
 - 3-wire connection, works without the connection of a neutral conductor
 - power output: 10-160 VA
 - for flawless function of the product is necessary the presence of a load R, L or C between input S and neutral wire.
- **SMR-T**
 - 3-wire connection, works without the connection of a neutral conductor
 - power output: 10 - 160 VA
 - between input S and neutral wire is possible connect any load R, L, or C - that is not necessary (unlike SMR-K).
- **SMR-H**
 - 4-wire connection
 - power output: 0 - 200 VA.
- **SMR-B**
 - 4-wire connection
 - output contact 1x 16 A/4000 VA, 250 V AC1
 - enables switching of fluorescent lights and also energy saving lights
 - independent galvanically separated input AC/DC 5 - 250 V, for example for control from a security system.

Description

SMR-H

SMR-B

Function

Function a - delay off on entering edge

output times when it is switched. Each following pressing (max. 5x) increases time. Long pressing swithes output off

Function b - delay off on downward edge

output times after button is switched off, switches immediately

Function c - delay off on downward edge

after switching off output switches on and times.

Function d - cycler - flasher impulsem

output cycles in regular interval, cycler starts with an impulse

Function e - puls shift

delay on after the switch is switched on and delay on after it is switched off

Function f - delay on

delay on after switch is switched on until it is switched off

Function g - impulse relay

switches on by a press, another pressing switches the output off. The length of pressing doesn't matter, it is possible to set reaction delay by a potentiometer and thus eliminate rebound of a button

Function h - impulse relay with delay

one press switches on, another one switches the output off in case it is done before the end of timing

Function i - cycler starting with pause

output cycles in regular intervals, cycler starts with a pause

Function j* - cycler starting with gap

delay ON until switched off until it is de-energized or a switch is pressed again.

Note.: *- Function j is valid only for SMR-B

Connection SMR-K, SMR-T, SMR-H, SMR-B

Typical wiring of SMR-K - timer for fan

SMR-T: Fan controlling depending on the lighting

Typical wiring of SMR-H - timer for lamp

Fan control depending on the lighting

Input for external control voltage AC/DC 5-250 V

Note: SMR-K, SMR-T, SMR-H are not intended for switching capacity load (energy saving bulbs and LED lights with capacity power etc.), these products are only intended for switching resistive and inductive loads (incandescent bulbs, fans, etc.). SMR-B with relay output is intended to other types of load. Using this output it is possible to switch the load of R, L or C-values listed in the load table. Between inputs S and neutral wire is possible to connect any load of R, L or C, however this is not (unlike the SMR-K) condition.

Example of connection SMR-T

Digital

Analog

SHT-1

SHT-1: time switch with daily, weekly programming. 1-channel, output 16 A changeover/SPDT. SHT-1/2: as SHT-1, but 2-channel. page 45

SHT-1/2

SHT-3

As SHT-1 but with daily, weekly, monthly, and yearly programming up to 2095. SHT-3/2: as SHT-3, but 2-channel. page 45

SHT-3/2

ATS-1DR

Time switch with daily program, power backup 100h, 1x switch contact 16 A page 48

ATS-2D

Time switch with daily program, 1x switch contact 16 A page 49

ATS-2DR

Time switch with daily program power backup 150 hrs, 1x switch contact 16 A page 49

ATS-2WR

Time switch with weekly program, power backup 150 h, 1x switch contact 16 A page 49

With astronomical program

SHT-4

Time switch with an astronomical program to control the lighting without using a light sensor. 2-channel. page 46

With time synchronization

SHT-6

Time switch with DCF managing. Daily, weekly and yearly program, output 16 A. 1-channel. page 46

DCFR-1

Universal DCF module, which is designed for controlling the SHT-6 timer, and other devices page 47

With NFC communication

SHT-7

Time switch with weekly and yearly program. Setting up with a smartphone supporting NFC transfer. page 46

Accessories for SHT-4, SHT-6, SHT-7

Plug-in module

Suitable for backup battery type CR2032 (3V) EAN code: 209930603123

Symbol

- **SHT-4:** Used to control different loads according to sunrise and sunset time based on geographical coordinates:
 - preset coordinates for European cities incl. manual setting options
 - hour meter for each channel
 - two-channel design - each channel is adjustable individually.
- **SHT-6:** Used to control various appliances depending on real time, which is synchronized with the DCF77 signal. This eliminates inaccuracies at the set time.
 - single channel design
 - hour meter.
- **SHT-7:** Used to control various appliances depending on real time, incl. settings via smartphone thanks to NFC transmission support
 - two-channel design - each channel is adjustable individually
 - easy transfer of settings to multiple devices conveniently in the application and, conversely, simple transfer of settings from the timer to the application in the telephone.
- Sealable transparent front panel cover, easy to operate with 4 buttons.
- Real-time backup - up to 3 years with replaceable battery.
- Including daily, weekly, monthly and yearly regimen.
- Automatic winter/summer time changeover.

- Mechanical timer is a simple and inexpensive alternative to digital switches for controlling real-time heating, ventilation, cooling, lighting or pump systems:
 - daily program.
- Selection of operating modes using a switch on the panel:
 - ☉ switches automatically according to the set program
 - I closes permanently.
- Power backup after power failure 100 hours, when fully charged.
- Sealable transparent front panel cover.

Description

Circuit connection

- The mechanical time switch is a simple and inexpensive alternative to digital time switches for controlling heating, ventilation, cooling, lighting systems or pumps depending on real time.
- Daily or weekly program
- Selection of operating modes using the switch on the panel:
 - ⌚ switches automatically according to the set program
 - I permanently closes
 - O permanently opens
- Power reserve after power off for up to 150 hours after fully charged.
- Sealable transparent front panel cover.

Notes

Max. time of changeover of contact is 10 ms.

VS316/24 or VS316/230 enables switching of different phases or 3-phase voltage.

* possibility to choose blue and white color of LED for power relays line VS in case of minimal order quantity 100 pcs.

Accessories

VSK-11

Auxiliary contacts:
1x switching,
1x breaking.

VSK-20

Auxiliary contacts:
2x switching.

- For switching electric circuits, especially for resistive loads and 3-phase induction motors:
 number of contacts **VS120: 1**
 number of contacts **VS220: 2**
 number of contacts **VS420, VS425, VS440, VS463: 4**.
- It is produced in configuration of switching and breaking contacts:
VS120: 10, 01
VS220: 20, 11, 02
VS420: 40, 31
VS425: 40, 31, 22, 13 04
VS440: 40, 31, 22, 04
VS463: 40, 31, 22.
- Protection IP20 - on request we deliver covers that ensure protection IP40 for all terminals.
- DIN rail or panel mounting.

- Special version of installation contactors with not only basic functions but also with manual control.
- For switching accumulative appliances for heating and service water warming.
- Description of individual positions of manual control.
 - AUTO: common function as with installation contactors without manual control.
 - 1: shifting from AUTO to 1: operational contacts are closed and back contacts are open until there is another impulse to a contactor coil.
 - 0: contacts are open (operational contact) or closed (stand-by contact) regardless voltage.
- Optical indicator: ON-OFF.
- It is produced in configuration of making and breaking contacts:
 - VSM220: 20, 11, 02
 - VSM425: 40, 31, 22, 04.
- It is possible to connect auxiliary contacts VSK to contactors VSM220, VSM425.

Connection VSM220

VSM220 - only AC supply voltage

VSM220-20

VSM220-11

VSM220-02

Connection VSM425

VSM425 - only AC supply voltage

VSM425-40

Technical parameters	MR-41	MR-42
Number of functions:	1	2
Supply terminals:	A1 - A2	
Voltage range:	AC/DC 12 - 240 V (AC 50/60 Hz)	
Burden (max.):	AC 0.17 - 3 VA/DC 0.1 - 1.2 W	AC 0.17 - 12 VA/DC 0.11 - 1.9 W
Voltage range:	AC 230 V (50/60 Hz)	
Consumption (apparent/loss):	AC max. 12 VA/1.2 W	AC max. 12 VA/1.9 W
Max. dissipated power (Un + terminals):	3 W	4.5 W
Supply voltage tolerance:	-15 %; +10 %	
Supply indication:	green LED	
Output		
Number of contacts:	1x changeover/SPDT (AgSnO ₂)	2x changeover/DPDT (AgSnO ₂)
Current rating:	16 A/AC1	
Breaking capacity:	4000 VA/AC1, 384 W/DC	
Inrush current:	30 A/< 3 s	
Switching voltage:	250V AC/24V DC	
Output indication:	red LED	
Mechanical life:	30.000.000 operations	
Electrical life (AC1):	70.000 operations	
Controlling		
Consumption of input:	AC 0.025 - 0.2 VA/DC 0.1 - 0.7 W (UNI), AC 0.53 VA (AC 230 V)	
Load between A2-ON/OFF:	Yes	
Control. terminals:	A1 - ON/OFF	
Glow tubes connctions:	230 V - Yes/UNI - No	
Max. amount of glow lamps connected to controlling input:	UNI - glow lamps cannot be connected, 230 V - max. amount 5 pcs (measured with glow lamp 0.68 mA/230 V AC)	
Impulse length:	min. 25 ms/max. unlimited	
Other data		
Operating temperature:	-20 °C to +55 °C (-4 °F to 131 °F)	
Storage temperature:	-30 °C to +70 °C (-22 °F to 158 °F)	
Dielectrical strength:	4 kV (supply - output)	
Operating position:	any	
Mounting:	DIN rail EN 60715	
Protection degree:	IP40 from front panel/IP20 terminals	
Overvoltage category:	III.	
Pollution degree:	2	
Max. cable size (mm ²):	solid wire max. 1x 2.5 or 2x 1.5/ with sleeve max. 1x 2.5 (AWG 12)	
Dimensions:	90 x 17.6 x 64 mm (3.5" x 0.7" x 2.5")	
Weight:	(UNI)-64 g (2.3 oz.), (230)-61 g (2.2 oz.)	(UNI)-88 g (3.1 oz.), (230)-85 g (3 oz.)
Standards:	EN 60669-1, EN 60669-2-1	

- Latching relays, controlled by buttons from several locations can replace three way switches or cross bar switches thanks to control by buttons (unlimited number, connected in parallel by 2 wires), installation gets more transparent and faster for mounting.
- Relays MR-41/UNI, MR-42/UNI memorize its last state even after supply failure. During the failure relay will turn off and after re-energizing will automatically turns on.
- **MR-42**
 - options - 2x parallel contacts or the other relay is latching
 - function selected via external jumper between B1 - B2.

- Bistable relays are used to switch electrical circuits by impulse command, especially for lighting control in ordinary houses, warehouses, production halls and other buildings.
- Faster and easier installation thanks to an unlimited number of buttons, connected in parallel by two wires, which is a practical replacement for AC and cross switches.
- Last but not least, they offer savings in the number of wires used and, in the case of the control circuit, the possibility of using wires with a smaller cross-section, where the power input is minimal compared to the power circuit.
- The state of the Bistable relay changes with a short control pulse. As a result of which the relay in the steady state has zero consumption and is noiseless.
- All relays can be controlled manually using a switch on the relay panel (I-O), which also serves as to signal the status of the contacts.
- For types BR-220 and BR-232, it is possible to disconnect the electrical switch control and as a result the state of the relay can then only be changed manually (service, maintenance).

Technical parameters	BR-216-10/11/20	BR-220-20	BR-232-20
Main circuit (contact)			
Rated insulation voltage (U _i):		440 V	
Thermal current (I _{th}):	16 A	20 A	32 A
Number of poles:	1, 2, 2	2	2
Contact configuration:	10, 11, 20	20	20
Operational Power (P _o)			
AC-1, AC-7a for 230 V, 1 phase:	3.5 kW	4.4 kW	7 kW
AC-2 for 230 V, 1 phase:	1.2 kW	1.5 kW	2.4 kW
AC-3, AC-7b for 230V, 1 phase:	0.37 kW	0.55 kW	1.1 kW
DC-1 (L/R ≤ 1 ms)

Technical parameters		SOU-1
Supply terminals:		A1 - A2
Voltage range:	UNI	AC/DC 12 - 240 V (AC 50/60 Hz)
Power input max.:		AC 1.5 VA/0.9 W
Voltage range:	230	AC 230 V (50/60 Hz)
Power input max.:		3 VA/2 W
Max. dissipated power (Un + terminals):		4 W
Supply voltage tolerance:		-15 %; +10 %
Supply indication:		green LED
Time delay:		0 - 2 min
Time delay setting:		potentiometer
Illumination rang LUX1:		1 - 100 Lx
Illumination rang LUX2:		100 - 50 000 Lx
Output		
Number of contacts:		1x changeover (AgSnO ₂)
Current rating:		16 A/AC1
Breaking capacity:		4000 VA/AC1, 384 W/DC
Inrush current:		30 A/< 3 s
Switching voltage:		250 V AC/24 V DC
Output indication:		red LED
Mechanical life:		10.000.000 operations
Electrical life (AC1):		70.000 operations
Control		
Power the control input:		0.3 W
Load between S-A2:		yes
Control. terminals:		A1 - S
Impulse length:		min. 25 ms/max. unlimited
Reset time:		150 ms
Other information		
Operating temperature:		-20 °C to +55 °C (-4 °F to 131 °F)
Storage temperature:		-30 °C to +70 °C (-22 °F to 158 °F)
Dielectrical strength:		4 kV (supply - output)
Operating position:		any
Mounting:		DIN rail EN 60715
Protection degree:		IP40 from front panel/IP20 terminals
Sensor cable length:		max. 50 m (standard wire)
Overtoltage category:		III.
Pollution degree:		2
Max. cable size (mm ²):		solid wire max. 1x 2.5 or 2x 1.5/ with sleeve max. 1x 2.5 (AWG 12)
Dimensions:		90 x 17.6 x 64 mm (3.5 x 0.7 x 2.5 inch)
Weight:		(UNI): 66 g (2.3 oz.)/(230 V): 63 g (2.2 oz.)
Dimensions of sensor SKS-100:		58 x Ø 24 mm (2.3" x Ø 0.9")
Weight of sensor SKS-100:		20 g (0.5 oz.)
Standards:		EN 60669-1, EN 60669-2-1

- Is used to control lights on the basis of ambient light intensity.
- Used for switching street illumination and garden lights, illumination of advertisements, shop windows, etc.
- Level of ambient intensity is monitored by an external sensor SKS-100 and output is switched according to set level on the device.
- Control input for additional control, e.g. time switch, preswitch etc.
- Level of illumination adjustable in two ranges:
 - 1 - 100 lx and 100 - 50000 lx.
- Adjustable time delay to eliminate short term fluctuation in illumination.
- External sensor IP65 suitable for mounting on the wall (cover and holder of a sensor are a part of the package).

Description

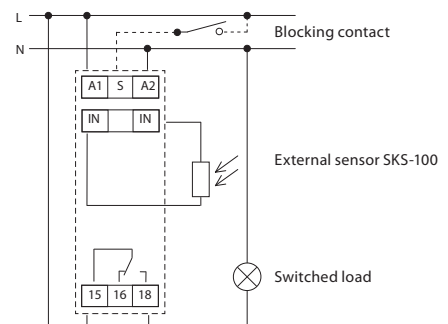

LUX1: Range 1 - 100 Lx.

LUX2: Range 100 - 50 000 Lx.

TEST: By switching to position TEST all function are switched off and switching contacts of output relay are switched on. The function TEST is used for testing of right connection of load and for verification of failure (breaking of the bulb).

* ERROR - sensor short circuit

- Is used for control of lights on the basis of ambient light intensity and real time (combination of SOU-1 and time switch SHT-3 in one device).
- Time clock can override the light sensor for applications when lights are not required.
- Switching: according to a program (AUTO)/permanently manual/random (CUBE).
- External sensor IP65 issuitable for mounting on the wall/in panel (cover and sensors are part of delivery).
- Sealable transparent cover of front panel.
- Backup of data and time by battery (up to 3 years).
- Easy replacement of backup battery with plug-in module located on front panelof device (no disassembly required).

Dielectrical strength:	4 kV (supply-output)	
Operation position:	sensor-side down or on the sides	
Protection degree:	IP 65	
Overvoltage category:	III.	
Pollution level:	2	
Max. cable size (mm ²):	max. 1x 2,5, max. 2x 1,5/ with sleeve max. 1x 2,5 (AWG 12)	
Suggested power-supply cable:	CYKY 3x 2,5 (CYKY 4x 1,5)	
Dimensions:	98 x 62 x 34 mm (3.9" x 2.4" x 1.3")	
Weight:	117 g (4.1 oz.)	
Standards:	EN 60669-1, EN 60669-2-1	

Device is standardly supplied with jumper L-15 (3-wire connection).
For the correct function of device is necessary sensor-side down device mounting.

- Is used as control of the device on the basis of ambient light intensity.
- External version in IP65, box for mounting on the wall, front cover removable without screws.
- Built in high resolution light sensor.
- Two devices in one, function is set by jumper:
 - twilight switch - contact closes by decreasing of ambient light intensity, and opens by its increasing.
 - light switch - contact closes by increasing ambient light intensity, and opens by decreasing light intensity. Used for switching of devices by reaching of pre-set ambient light level, usually sun shine (pulling down the shutters or blinds, activation of solar panels).
- 3 adjustable levels of time delay (for elimination of short-term fluctuations of light intensity - for short increases in light intensity).

- **PSB-10:** switched stabilized power supplies with fixed output voltage, designed for mounting in the installation box.
- **PSB-10-12:** stabilized power supply 12 V/10 W
- **PSB-10-24:** stabilized power supply 24 V/10 W.
- **PS-30-R:** switching stabilized adjustable power supply 12-24 V/30 W.
- The output current is limited by an electronic fuse, when the maximum current is exceeded, the source switches off and switches on again after a short time delay.
- Thermal protection - in case of thermal overload the source switches off, after cooling it switches on again

Device description

PSB-10-12/PSB-10-24 designated for installation into an installation box. Suitable for controlling of lighting sources, thermo valves, shutter engines, etc.

PS-30-R

Connection

PSB-10-12 (PSB-10-24)

PS-30-R

- Rated output voltage 12 or 24V DC with the possibility of regulation.
- High efficiency of up to 90%.
- Low ripple & noise.
- Protection: Over load , Over voltage and Short circuit.
- Continuously adjustable output voltage to adapt to the specific application, e.g. the need to compensate for the voltage drop caused by the length of the line.

Other information		
Operating temperature:	-20 to +40 °C (-4 °F to 104 °F)	
Storing temperature:	-20 to +60 °C (-4 °F to 140 °F)	
Dielectrical strenght (prim/sec):	4 kV	
Protection degree:	IP40 from front panel/IP20 terminals	
Max. cable size (mm ²):	solid wire max. 1x 2.5 or 2x 1.5/ with sleeve max. 1x 1.5 (AWG 12)	
Dimensions:	90 x 52 x 65 mm (3.5" x 2" x 2.6")	
Weight:	398 g (14 oz.)	368 g (13 oz.)
Standards:	EN 61204-1, EN 61204-3, EN 61204-7	

WARNING!
Values of max. load are valid for (operational) temperature.
Total loads on all output terminals may not exceed this values:
- by supplying 230 V-253 V - 8W
- from 230 V to 207 V output power is proportionately decreasing onto 5 W.

Regulated stabilized power supply ZSR-30

- Supply of various devices and appliances by safe voltage with fully galvanic separation from the main.
- Output voltage: DC 5-24 V stab., DC 24 V unstab. and AC 24 V.
- Exceeded current limit values is indicated by LED flashing.
- When there is full short-circuit, output is disconnected, output current is limited by an electronic fuse.

Nonstabilized power supply ZNP-10-24V

- AC and DC output voltage 24 V, nonstabilized.
- Power supply with fixed output voltage.
- Protection against short-circuit and overload by a safety fuse.

R, L, C, ESL, LED²

DIM-15

Designated for dimming of: dimmable energy saving fluorescent lamps, LED lamps.

R, L, C, - resistive, inductive and capacitive loads.
page 76

SMR-M

For mounting under a wall-switch into an installation box KU68 (or similar). Dimmable energy saving fluorescent lamps, LED lamps.

R, L, C, - resistive, inductive and capacitive loads.
page 76

R, L, LED¹

DIM-2

Staircase switch with gradual dimming up/down, level and time of illumination, all values are adjustable.

R = 10 - 500 VA
L = 10 - 250 VA.
page 78

SMR-S

As DIM-5, but for mounting under a wall-switch into an installation box KU68 (or the similar), 3-wire connection (without neutral).

R = 10-300 VA
L = 10-150 VA.
page 79

R, L, C, LED²

DIM-6

Power dimming to 2kW. Can be controlled by button, external potentiometer, 0-10 V (1-10 V) system iNELS.

R = 2000 VA
L = 2000 VA
C = 2000 VA.
page 80

DIM6-3M-P

DIM6-3M-P is a power module expansion unit for DIM-6. It cannot be operated independently.

R = 1000 VA
L = 1000 VA
C = 1000 VA.
page 81

R, L, C, ESL, LED²

RFDEL-76M

Universal six-channel dimmer with a load capacity of up to 150 VA/channel (230 V version) The dimmer channels can be connected in parallel and thus increase the possible load up to a maximum of 900 VA. Each channel has a separate, galvanically isolated control input.
page 84

R, L, C, ESL, LED²

LIC-1

Intensity controller for maintaining the constant illumination level. Dimmable energy saving fluorescent lamps, LED lamps.

R, L, C, - resistive, inductive and capacitive loads.
page 82

LIC-2

Serves as control unit for dimmers or electronic ballasts with analog control 0-10 V/1-10 V.
page 83

Accessories for LIC-1, LIC-2

SKS-100

Photosensor for wall / panel mounting. IP65 protection.

Key to symbols

TYPE OF LOAD (symbols)	bulbs, halogen lamps	low-voltage el.bulbs 12/24V wound transformers	low-voltage el.bulbs 12/24V electronic transformers	ESL dimmable compact fluorescent lamps	Dimmable LED bulbs
	R	L	C	ESL	LED ^{1,2}

Demonstrated symbols are informative

Expandatory:

Dimmer with designated load:

R - resistive

L - inductive

C - capacitive

ESL - energy saving bulbs

LED¹ - dimmable LED bulbs, designed for dimmers with phase-controlled rising edge (triac dimmers)

LED² - dimmable LED bulbs designed for dimmers with phase or phase-to-phase phase control (dimmers with MOSFET).

IPxx protection - under normal conditions: normal conditions are understood as such conditions of operating an electrical device, installation and power supply network for which the entire device is designed, produced and installed. Upon these normal conditions of use and upon normal maintenance, all protective devices must be effective throughout the entire expected service life of the product.

Recommendation for mounting modular dimmers: leave a gap of min. 0.5 module (approx. 9 mm / 0.4") on side of the device to ensure better cooling of the device.

Standards:	EN 60669-1, EN 60669-2-1	

* Due to a large number of light source types, the maximum load depends on the internal construction of dimmable light sources and their power factor $\cos \varphi$. The power factor of dimmable LEDs and ESL bulbs ranges from $\cos \varphi = 0.95$ to 0.4. An approximate value of maximum load may be obtained by multiplying the load capacity of the dimmer by the power factor of the connected light source.

** For more information see page 75.

Warning: it is not allowed to connect inductive and capacitive loads at the same time.

- Designed for dimming of incandescent bulbs and halogen lights with wound or electronic transformer, dimmable light bulbs and dimmable LED².
- Enables gradual setting of luminance by push-button (non-detent) or parallel buttons.
- Returns to last state upon re-energization.
- Type of light source is set by switch-over on the front panel of device.
- Min. luminance, set by potentiometer on the front panel, eliminates flashing of light sources.

DIM-15
(SMR-M)

Device description

Functions and controlling

- short button press (<math><0.5\text{ s}</math>) turns the light off or on
 - long press (>math>>0.5\text{ s}</math>) enables slight regulation of light intensity
 - setting of minimal luminance is possible only during decreasing of luminance by long button press
 - setting of minimal luminance by saving fluorescent lamps serves for harmonizing of lowest light intensity prior its unprompted switching off
- Luminance setting:
LED, R, L, C:
- if the light is turned off, short press (<math><0.5\text{ s}</math>) switches the light onto last set luminance level
- ESL:
- when light is off, short impulse turns lamp on and then luminance is decreased to set level

Connection example

Additional information

- it is not possible to dim energy-saving lamps without marking: dimmable
- an incorrect setting of light source has effect only on dimming range, it means neither dimmer or load get damaged
- max. number of dimmable light sources depends on their internal structure
- it is not recommended to connect light sources with different types and brands, to one dimmer

DIM-2 /230 V: 8595188112475
DIM-2-1h /230V: 8595188135740

Technical parameters	DIM-2
Supply terminals:	A1 - A2
Voltage range:	AC 230 V/50 Hz
Burden (unloaded):	max. 8 VA/0.6 W
Max. dissipated power:	1.5 W
Supply voltage tolerance:	-15 %; +10 %
Supply indication:	green LED
Time setting by:	potentiometers
Time deviation:	10 % - mechanical setting
Repeat accuracy:	5 % - set value stability
Temperature coefficient:	0.01 %/°C, at = 20 °C (0.01 %/°F, at = 68 °F)
Recovery time:	max. 80 ms

Controlling T1 (button)

Terminals:	T1 - A1
Voltage:	AC 230 V
Power on control input:	max. 1.5 VA
Impulse length:	min.100 ms/max. unlimited
Glow-lamps:	Yes
Max. amount of glow lamps connected to controlling input:	230 V - max. amount 50 pcs (measured with glow lamp 0.68 mA/230 V AC)

Controlling T2 (switch)

Terminals:	T2 - A1
Voltage:	AC 230 V
Power on control input:	0.1 VA
Impulse length:	min.100 ms/max. unlimited

Output

Contactless:	1x triac
Current rating:	2 A
Resistance load:	10 - 500 VA
Inductive load:	10 - 250 VA

Other information

Operating temperature:	-20 °C to +55 °C (-4 °F to 131 °F)
Storage temperature:	-30 °C to +70 °C (-22 °F to 158 °F)
Operating position:	any
Mounting:	DIN rail EN 60715
Protection degree:	IP40 from front panel/IP10 terminals
Overvoltage category:	III.
Pollution degree:	2
Max. cable size (mm ²):	solid wire max. 2x 2.5 or 1x 4/ with sleeve max. 1x 2.5 or 2x 1.5 (AWG 12)
Dimensions:	90 x 17.6 x 64 mm (3.5" x 0.7" x 2.5")
Weight:	64 g (2.3 oz.)
Standards:	EN 60669-1, EN 60669-2-1

Symbol

- Designated for dimming el. bulbs, halogen lights and halogen lights with winding transformers and Dimmable LED¹.
- Intelligent control of halogen lights, function of gradual switching on and dimming.
- Controlling inputs for push button and switch.
- Values are set on front panel of the product, adjustable:
 - maximum dim-up
 - speed (fluency) of dim-up
 - speed (fluency) of dim-down
 - time for which a light is on with maximum dim-up.
- Output without contact: 1x triac.
- Parallel connection of controlling pushbuttons is possible.
- Protection against over-temperature inside the product - switches output off + signalizes overheating by LED flashing.
- Note: possibility of start and finish adjustment up on 1 second to 1 hour, device has description DIM-2 1h.

Description

Recommendation for mounting: leave a gap of min. 0.5 module (approx. 9 mm,(0.3")) on side of the device to ensure better cooling of the device.

Connection

Function

Controlled via input T1 (button)

Dim-up delay-down is started by a button. Cycle extension - by re-pressing button (during the cycle).

Controlled via input T2 (switch)

The switch starts the cycle and it stops on max.set brightness. After the switch is off, the cycle will continue until completed.

Legend:

- ☀ Brightness: 10 - 100 %
- t1 Dim-up time: 1 - 40 s
- t2 Time delay: 0 s - 20 min
- t3 Dim-down time: 1 - 40 s

- Button-controlled dimmers designated for flush mounting into a wiring box.
- Possible to control from more places (parallel connections).
- Protection against temperature overrun inside the device.
- Designated for dimming el. bulbs, halogen lights and halogen lights with winding transformers and Dimmable LED¹.
- 3-wire connection, functional without neutral.
- Max. load: 300 VA (el. bulbs or halogen lights with wound transformer).
- Contactless output -1x triac.
- With exchangeable fuse.

Description of SMR-S

Connection

Typical connection of SMR-S - dimmer of lights

Warning: it cannot be used for fluorescent lights and energy saving lights!

Function

Short press (<0.5 s) turns a light on, another short press turns it off. A longer press (>0.5 s) causes a gradual regulation of light intensity min-max-min round until the button is released. After releasing a set intensity is kept in memory, further short presses turn the light on/off keeping the set intensity. The intensity can be changed by further long press. After de-energising the relay remembers the set value.

DIM-6 /230 V: 8595188136914

Technical parameters	DIM-6
Supply terminals:	L, N
Supply voltage:	AC 230 V (50 Hz)
Burden (unloaded):	max. 4 VA/3.2 W
Max. dissipated power:	6 W
Tolerance of voltage range:	-15 %; +10 %
Max. output power:	max. 2 000 VA
Module extendable:	to 10 000 VA
Galvanic separation of BUS and power output:	Yes
Isul. volt. between outputs and inner circuits:	3.75 kV, SELV according to EN 60950
Control - button type	
Control voltage:	AC/DC 12-240 V
Control terminals:	S-, S+, galvanically separated
Power of control input (max.):	0.53 VA (AC 12-240 V), 0.35W (DC 12-240V)
Length of control impulse:	min. 25 ms/max. unlimited
Recovery time:	max. 150 ms
Connection of glow lamps:	No
Control 0(1)-10 V	
Control terminals:	0(1)-10 V, GND
Control voltage:	0-10 V or 1-10 V
Min. current of control input:	1 mA
BUS control:	
Control terminals:	BUS+, BUS-
BUS voltage:	27 V DC
Current of control input:	5 mA
Indication of data transmission:	yellow LED
Output	
Contactless:	4 x MOSFET
Current rating:	10 A
Resistive load:	2 000 VA*
Inductive load:	2 000 VA*
Capacitive load:	2 000 VA*
Indication of output state:	yellow LED, according to load type
Other information	
Operating temperature:	-20 °C to +35 °C (-4 °F to 95 °F)
Storing temperature:	-30 °C to +70 °C (-22 °F to 158 °F)
Operating position:	vertical
Mounting:	DIN rail EN 60715
Protection degree:	IP40 from front panel
Purpose of control device:	operative control device
Construction of control device:	individual control device
Char. of automatic operation:	1.B.E
Heat and fire resistance cat.:	FR-0
Anti-stroke category (immunity):	class 2
Rated impulse voltage:	2.5 kV
Overvoltage category:	III.
Pollution level:	2
Profile of connecting wires (mm ²)	
output part:	max.1x2.5, max. 2x1.5/with sleeve max. 1x1.5 (AWG 12)
control part:	max.1x2.5, max. 2x1.5/with sleeve max. 1x2.5 (AWG 12)
Dimensions:	90 x 105 x 65 mm (3.5" x 4.1" x 2.6")
Weight:	392 g (13.8 oz.)
Standards:	EN 60669-1, EN 60669-2-1

- Designed for dimming of incandescent bulbs and halogen lights with wound or electronic transformer and Dimmable LED2.
- DIM-6 control options:
 - button (parallel button connection)
 - external potentiometer
 - analog signal 0-10 V (1-10 V)
 - iNELS BUS system.
- The DIM-6 can connect up to 8 pieces of DIM6-3M-P and control up to 10.000 VA.
- Electronic overcurrent protection, overvoltage and short-circuit protection.
- Protection against over-heating inside device - switch off output + signalize overheat by flashing red LED.
- 6-MODULE version, DIN rail mounting.

Description

Types of indication LED

- RL - Yellow - indicates configuration of load RL
- RC - Yellow - indicates configuration of load RC
- Green - button control mode selected
- 0-10V - Green - 0-10 V signal control mode selected
- 1-10V - Green - 1-10 V signal control mode selected
- iNELS - Green - BUS conductor bar-iNELS control mode selected
- BUS - Yellow - indicates data transfer communication of BUS
- OVERLOAD - Red - indicates overload, flashing LED signalizes over-heating inside the device, shinning LED signalizes current overload

Symbol

* Warning: it is not allowed to connect inductive and capacitive loads at the same time.

EAN code
DIM6-3M-P: 8595188139106

Technical parameters	DIM6-3M-P
Load:	max. 1 000 VA
Max. dissipated power:	6 W
Output	
Contactless:	2 x MOSFET
Current rating:	5 A
Resistive load:	1 000 VA*
Inductive load:	1 000 VA*
Load capacity:	1 000 VA*
Other information	
Operating temperature:	-20 °C to +35 °C (-4 °F to 95 °F)
Storing temperature:	-30 °C to +70 °C (-22 °F to 158 °F)
Operating position:	vertical
Mounting:	DIN rail EN 60715
Protection degree:	IP40 from front panel
Controlling device purpose:	operating control device
Controlling device construction:	additional control device
Automatic operating char.:	1.B.E
Heat and fire resistance category:	FR-0
Immunity category:	class 2
Rated impuls voltage:	2.5 kV
Overvoltage category:	III.
Pollution level:	2
Profile of connecting wires (mm ²)	
output part:	max.1x2.5, max. 2x1.5/with sleeve max. 1x1.5 (AWG 12)
control part:	max.1x2.5, max. 2x1.5/with sleeve max. 1x2.5 (AWG 12)
Size:	90 x 52 x 65 mm (3.5" x 2" x 2.6")
Weight:	130 g (4.5 oz.)
Standards:	EN 60669-1, EN 60669-2-1

- Expanding power module only for use in combination with DIM-6.
- DIM6-3M-P provides power increase (of about 1 000 VA) of load connected to DIM-6 (it means: 2 000 VA (DIM-6) + 1 000 VA (DIM6-3M-P) = 3 000 VA).
- The DIM-6 can connect up to 8 pieces of DIM6-3M-P and control up to 10.000 VA (the load must be divided into individual power blocks so that their maximum power is not exceeded).
- Attention-device has to be protected by circuit breaker accordant to the load connected to device.
- DIM-6 in installation is cooled by natural air flow. If the natural air flow access is reduced, cooling has to be provided by ventilator. Rated operating temperature is 35 °C/95 °F.
- If there are several DIM6-3M-P connected to DIM-6, the distance between them has to be min. 2 cm/0.8".
- Max. length of BUS EB is 1 m/39.4" and the connection has to be realized by shielded cable.

Device description

Note

The DIM-6 dimmer (L, V) terminals and the DIM6-3M-P expansion module are three-fold for easier multi-part loads.

* Warning: it is not allowed to connect loads of inductive and capacitive character at the same time.

Connection

A quick fuse corresponding to the power of each module must be included in the L supply for each module.

SKS-100

Technical parameters	LIC-1
Supply terminals:	A1 - A2
Supply voltage:	AC 230 V (50/60 Hz)
Burden (unloaded):	max. 1.6 VA/0.8 W
Max. dissipated power:	1 W
Supply voltage tolerance:	±15 %
Power supply indication:	green LED
Control	
Button - control. terminals:	A1 - T
Control voltage:	AC 230 V
Control input power:	max. 0.6 VA
Control impulse length:	min. 80 ms/max. unlimited
Glow tubes connection (terminals: A1 - T):	Yes
Maximum number of connected glow lamps the control input:	230 V - max. amount 50 pcs (measured with glow lamp 0.68 mA/230 V AC)
Blocking input - terminals:	A1 - B
Control. voltage:	AC 230 V
Supply:	max. 0.1 VA
Connect glow-lamps (terminals A1 - B):	No
Impulse length:	min. 80 ms/max. unlimited
Output	
Output status indication:	2x MOSFET
Load capacity:*	300 VA (at $\cos \varphi = 1$)
Other information	
Operating temperature:	-20 °C to +35 °C (-4 °F to 95 °F)
Storage temperature:	-20 °C to +60 °C (-4 °F to 140 °F)
Operating position:	any
Mounting:	DIN rail EN 60715
Ingress protection:	IP40 from front panel/IP10 terminals
Overvoltage category:	III.
Contamination degree:	2
Connecting conductor cross-section (mm ²):	solid wire max. 2x 2.5 or 1x 4 with sleeve max. 1x 2.5 or 2x 1.5 (AWG 12)
Dimensions:	90 x 17.6 x 64 mm (3.5" x 0.7" x 2.5")
Weight:	66 g (2.33 oz.)
Standards:	EN 60669-1, EN 60669-2-1

* Due to a large number of light source types, the maximum load depends on the internal construction of dimmable LEDs and ESL bulbs and their power factor $\cos \varphi$. The power factor of dimmable LEDs and ESL bulbs ranges from $\cos \varphi = 0.95$ to 0.4. An approximate value of maximum load may be obtained by multiplying the load capacity of the dimmer by the power factor of the connected light source.

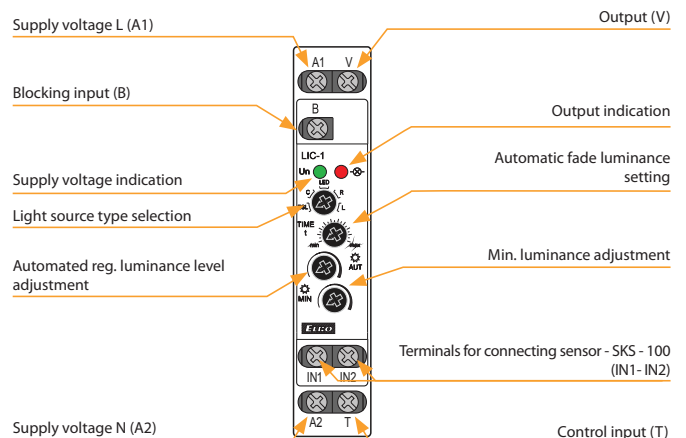

Warning: it is not allowed to connect inductive and capacitive loads at the same time.

- Designed for dimming of incandescent bulbs and halogen lights with wound or electronic transformer, dimmable light bulbs and dimmable LED².
- Automatically regulates the intensity of light in a room.
- External sensor scans the intensity and based on the preset value it decreases or increases the brightness of light.
- Operating status:
 - 1 - Off
 - 2 - Automatic regulation
 - 3 - Cleaning (maximum level of illumination)
 - 4 - Setting the minimum lighting brightness
 - 5 - Setting the desired level of illumination.
- Optional connection of buttons with 50 neon lamps.

2

For more information, see page 75

Description

Connection

Function

T-button control:

- pressing button shortly (< 0.5 s) always turns of lamp
- pressing button longer (0.5 to 3 s) turns on lamp in automatic regulation mode
- pressing button long (> 3 s) turns on lamp to full illumination - „cleaner“ mode
- after turning on the power supply, the dimmer is always turned off.

Thyristor B:

- serves to block automatic regulation (lamp turns off).
- WARNING!** The lamp may be turned on in “cleaner” mode even while blocked.
- After ending block mode, the lamp remains off.

Weight:	79 g (2.8 oz.)	
Standards:	EN 60669-1, EN 60669-2-1	

- Serves as control unit for dimmers or electronic ballasts with analog control 0-10 V / 1-10 V.
- Keeps a preset lighting intensity (automatic regulation).
- Control operating modes using existing button:
 - switch OFF
 - automatic regulation
 - cleaning (maximum illumination level).
- Setting the basic parameters of lighting is performed by potentiometers:
 - min. brightness of illumination
 - maximum illumination level
 - speed of dimming/illumination.

Device description

* if the level of brightness on P2 is set on maximum the range is 24 to 120 s

Connection

Functions

- Control button functions**
- short press (< 0.5 s) - always switches off output (relay and output voltage)
 - longer press (0.5 to 3 s) - runs automatic regulation of brightness level (according to sensor)
 - long press (> 3 s) - sets the max. brightness level (CLEANING mode).

Blocking input function

- switches off lighting - only in automatic regulation mode (has no influence in CLEANING mode), e.g. for central switching off of lighting.

Output relay

- switches on always upon switching on the lighting using the button if the DC output voltage is greater than 0.1 V (for the mode 0-10 V) or 1V (for the mode 1-10 V)
- upon switching off the light, the relay opens if the output voltage drops below the stated limits.

Red LED

- illuminates upon active output (at any brightness level)
- flashes upon activation of blocking.

Connecting conductor:	max. 2.5mm ² /1.5 mm ² with sleeve
Operating position:	vertical
Installation:	in the switchboard on DIN rail EN 60715
Dimensions:	90 x 105 x 65 mm (3.5" x 4.1" x 2.6")
Weight	320 g (11 oz.)
Standards:	ČSN EN 63044-1 ETSI, ČSN EN 300 220-2, ETSI ČSN EN 301489-3

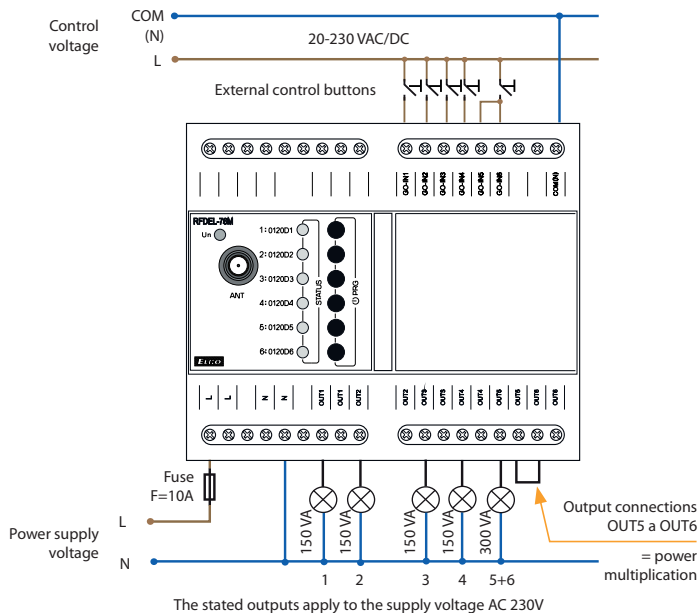

*Warning: it is not allowed to simultaneously connect loads of inductive and capacitive type in the same channel.

- RFDEL-76M is a universal 6-channel actuator, which is used to control the brightness intensity of dimmable sources R - L - C - LED - ESL.
- The maximum possible load is 150 VA for 230 V and 75 VA for 120 V for each channel.
- The individual channels of the dimmer can be connected in parallel and thus increase the maximum output load at the expense of the number of outputs.
- Each of the output channels is individually controllable and addressable.
- By setting the min. brightness eliminates flickering of different types of light sources, setting min. brightness and type of load is done using the PROG buttons.
- Electronic overcurrent, thermal and short-circuit protection, which switches off the output.
- 6 galvanically isolated inputs for wired buttons, which can be used to control the outputs independently of the RF.
- Communication with bidirectional RFIO2 protocol. The package includes an internal AN-I antenna, in case of placement of a sheet metal distribution element, you can use an external AN-E antenna to improve the signal.

USS
Designed for switching, control and signalling of auxiliary and power circuits.

USS | Controlling and signalling modules

- Independent switch units designed for flexible controlling and switching of power circuits.
- USS - "Do It Yourself" = it is possible to "click into" different types of switches and signalling units into the basic module.
- Units are delivered as components and configured by the user.
- 16 types of units: switches, push buttons, signal lights of different colours including flashing lights units are replaceable also for future (for example when an application is changed, extended, etc...).
- Units are also replaceable in the future (for example when an application is changed, extended, etc...).
- It is possible to place up to two units into one MODULE (for example 2x switch, 2x signalling lights or combinations) = saves space in switch-board panels.
- 1-MODULE (90 x 17.6 x 64 mm/3.5" x 0.7" x 2.5"), DIN rail mounting.
- Operating temperature -20 °C to +55 °C (-4 °F to 131 °F).
- M3 screw with clamp terminals.

- It serves to control supply voltage for appliances sensitive to supply tolerance, protection of the device against under/over voltage.
- HRN-3x is band voltage relay, HRN-6x is over/under voltage relay. For difference - see graph of function.
- **HRN-33, HRN-63**
 - monitors voltage in range AC 48 - 276 V
 - Umax and Umin can be monitored independently.
- **HRN-34, HRN-64**
 - like HRN-33, but voltage range is DC 6 - 30 V
 - monitoring of battery circuits (24 V).
- **HRN-35**
 - like HRN-33, but independent output relays for each voltage level
 - switching of other loads possible.
- **HRN-37, HRN-67**
 - like HRN-33, monitors voltage in range AC 24 - 150 V
 - it is possible to monitor level of overvoltage and undervoltage independently.
- Voltage Umin adjusted as % of Umax.
- 3-state indication - LEDs indicating normal state and 2 fault states.

Description

Connection

Function HRN-33, 34, 35, 37 (band voltage relay)

Monitoring relay series HRN-3x monitors level of voltage in single - phase circuits. Monitored voltage serves also as supply voltage. It is possible to set two independent (all occurrences) levels of voltage, when exceeded the output is activated. HRN-33 and HRN-34 - in normal state the output relay is permanently switched. It switches off when there is a limit settings. This combination of linkage of the output relay is advantageous when the full failure of supply (monitored) voltage is considered to be a faulty state in the same way as a decrease of voltage within the set level. Output relay is in both situations always switched off. Differently HRN-35 version uses independent relay for each level, in normal state it is switched off. If the upper level is exceeded (for example overvoltage) 1 relay switches on, when the bottom level (e.g. undervoltage) is exceeded, output is switched. It is thus possible to see the particular faulty state. To eliminate short peaks in the main the time delay, which is possible to be set in range 0 - 10 s, is used. It functions when changing from normal to faulty state and prevents unavailing pulsation of the output relay caused by parasitive peaks. Time delay doesn't apply when changing from faulty to normal state, but hysteresis (1 - 6 % depends on the voltage setting) apply. Thanks to changeover contacts it is possible to get other configurations and functions according to actual requirements of the application.

Function HRN-63, 64, 67 (over/under voltage relay)

Monitoring relay line HRN-6x serves to monitor levels of voltage in single-phase or DC circuits. Monitored voltage is in the same time also supply voltage. It is possible to set two independent levels of voltage. When Umax is exceeded, output is activated. In case voltage level falls below Umin, output is deactivated. This combination is advantageous when full absence of supply voltage is understood as faulty state, as well as voltage drop within the set level. To eliminate short voltage peaks in the main there is time delay which can be set in a range of 0 - 10 sec. Such delay applies in case of going from overvoltage to undervoltage. In case of returning from undervoltage to overvoltage this delay doesn't apply. Thanks to changeover output contacts it is possible to reach various configurations and functions according to requirements or an application.

Legend:
 Umax - upper adjustable level of voltage
 Un - measured voltage
 Umin - bottom adjustable level of voltage
 15-18 - switching contact of output relay No.1
 25-28 - switching contact of output relay No. 2
 LED ≥ Un - green indicator light
 LED U ≥ - red indicator light
 LED U > - red indicator light

Function

- If the value of the monitored voltage is in the zone between the set upper and lower levels, the status OK occurs - both relays are closed and the yellow LED illuminates. If the value of the monitored voltage is outside the set limits ($> U_{max}$ or $< U_{min}$), an error state occurs.
- When moving to an error state $U > U_{max}$, it times the delay t_1 and a red $LED > U$ simultaneously flashes. After the t_1 time elapses, the red $LED > U$ illuminates and the relevant relay opens.
- When moving to an error state $U < U_{min}$, it times the delay t_2 and a red $LED < U$ simultaneously flashes. After the time t_2 elapses, the red $LED < U$ illuminates and the relevant relay opens.
- When moving from the error status to the OK status, the relevant red LED immediately goes out, and the corresponding relay closes.

- Relay monitors phase sequence and failure, exceeding of monitored voltage in 3-phase main.
- **HRN-55**: supply from all phases, which means that function of relay is applicable also if 1-phase fails.
- **HRN-55N**: supply L1, L2, L3-N, it means that relay also monitors break of neutral point.
- Fixed delay T1 (500 ms) and adjustable delay T2 (0.1 - 10 s).

Description

Function

Connection

Symbol

Function description

Relay in 3-phase main monitors correct phase sequence and failure of any phase. Green LED is permanently ON and indicates presence of power supply voltage. In case of phase failure or exceeding voltage level red LED flashes and relay breaks. When changing to faulty state, time delay applies. Time delay setting is set by a potentiometer on front panel of the device. In case of incorrect phase sequence red LED shines permanently and relay is open. In case supply voltage falls below 60 % Un (OFF lower level) relay immediately opens with no delay and faulty state is indicated by red LED.

HRN-55 - thanks to supply all phases, this relay is able to stay operational also if one phase is out.

HRN-55N -supply L1, L2, L3-N, means that relay monitor also failure in neutral wire.

Function description

Relay in 3-phase main monitors size of phase voltage. It is possible to set two independent voltage levels and thus it is possible to set two independent voltage levels and monitor e.g. undervoltage and overvoltage independently. In normal state when voltage is within set levels, output relay is closed and red LED shines. In case supply voltage falls below 60 % Un (U_{OFF} lower level) relay immediately breaks without delay and faulty state is indicated by red LED. In case voltage exceeds or falls below the set levels, output relay breaks and red LED shines (LED indicates faulty state - flashes when timing). In case timing is in progress and faulty state is indicated, timing is immediately stopped.

Function description

Relay in 3-phase main monitors size of phase voltage. It is possible to set two independent voltage levels and thus it is possible to set two independent voltage levels and monitor e.g. undervoltage and overvoltage independently. In normal state when voltage is within set levels, output relay is closed and red LED shines. In case voltage exceeds or falls below the set levels, output relay opens and red LED shines (LED indicates faulty state - flashes when timing).

In case supply voltage falls below 60 % Un (U_{OFF} lower level) relay immediately opens without delay and faulty state is indicated by red LED.

In case timing is in progress and faulty state is indicated, timing is immediately stopped.

- It serves to monitor voltage, phase failure and sequence in switchboards, protection of devices in 3-phase mains.
- It is possible to set upper and lower level of monitoring voltage.
- Adjustable time delay eliminates short voltage peaks and failures in the main.
- In case supply voltage falls below 60 % Un (U_{OFF} lower level) relay immediately opens without delay.
- **HRN-54:** supply from all phases which means that relay is functional also in case when one phase is faulty.
- **HRN-54N:** supply L1, L2, L3-N, means that relay monitors also failure of neutral wire.

Function description

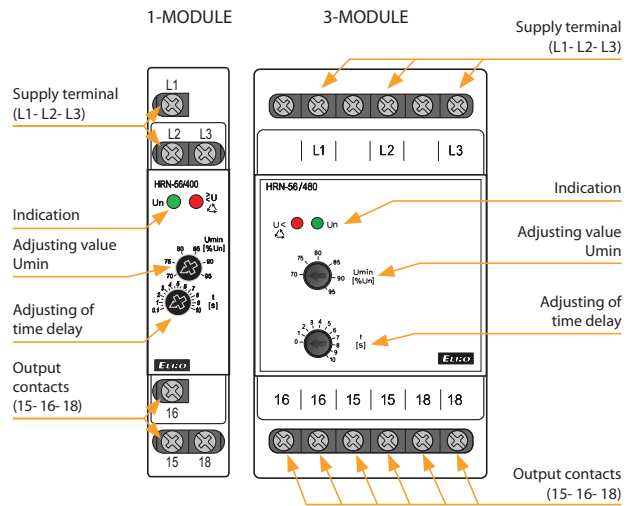

Relay in 3-phase main monitors correct phase sequence and phase failure. Green LED illuminates permanently and indicates energization. In case of phase failure red LED flashes and relay turns off. When changing to faulty state, time delay applies - delay setting is done by potentiometer on the front panel of the device. In case of incorrect phase sequence, red LED shines permanently and relay is open. In case supply voltage falls below 60 % Un (U_{off} lower level), relay immediately opens with no delay and faulty state is indicate by red LED.

HRN-56: Thanks to supply from all phases, relay is functional also in case of one phase failure.

- Relay monitors phase sequence and failure (e.g. control of correct motor winding etc.).
- Relay is designated for monitoring of 3-phase networks.
- Supply from all phases which means that relay is functional also in case of one phase failure.
- Supply and monitored supply Un:

- Monitoring of 3-phase mains:
 - voltage in 2 levels (undervoltage and overvoltage) in range 138-276 V (3x 400 V/230 V) or 280-480 V (3x 400 V)
 - phase asymmetry (can be switched off)
 - phase sequence
 - phase failure.
- Function of second relay (independent/parallel).
- HRN-43:** for circuits 3x 400 V (without neutral).
- HRN-43N:** for circuits 3x 400/230 V (with neutral).
- Galvanically separated supply voltage AC 400 V, AC 230 V, AC/DC 24 V.

Description

Description and importance of DIP switches

Connection

Symbol

Function

Overvoltage - undervoltage

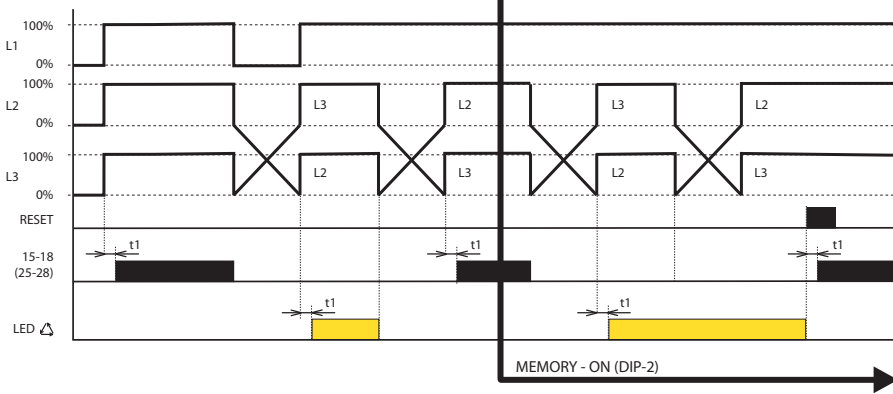

Legend:
 L1, L2, L3 - 3-phase voltage
 RESET - press of the button on frontal panel
 t1 - time delay, fixed
 t2 - time delay, adjustable
 15-18 output relay 1
 25-28 output relay 2
 LED $\geq U$ - indication overvoltage/undervoltage

Selection of 2nd the relay function:

In order to monitor 2 levels of voltage, it is possible to select if output relay will respond to each level individually (see the diagram "phase sequence") or both relays will switch in parallel way (see diagram "phase sequence"). Selection via DIP switch Output.

Phase sequence

Legend:
 L1, L2, L3 - 3-phase voltage
 RESET - press of the button on frontal panel
 t1 - time delay, fixed
 t2 - time delay, adjustable
 15-18 output relay 1
 25-28 output relay 2
 LED Δ - indication of phase sequence

Selection of 2nd relay function:

The function is not implied in the monitoring phase sequence, the relays are switched in parallel way. DIP switch Output is ignored.

Asymmetry - phase failure

Legend:
 L1, L2, L3 - 3-phase voltage
 RESET - press of the button on frontal panel
 t1 - time pause, fixed
 t2 - time pause, adjustable
 \blacktriangle - adjustable asymmetry
 15-18 output contact of relay 1
 25-28 output contact of relay 2
 LED \blacktriangle - asymmetry indicator

Selection of 2nd relay function:

The function is not implied in the monitoring phase sequence, the relays are switched in parallel way. DIP switch Output is ignored.

Relay is designated to monitor 3-phase circuits. Type HRN-43N controls voltage towards neutral wire, type HRN-43 controls interphase voltage. Relay can monitor voltage in two levels (overvoltage/undervoltage), phase asymmetry, sequence and failure. Each faulty state is indicated by individual LED. By DIP switch (Output) it is possible to define function of the other relay - independent function (1x for overvoltage, 1x for undervoltage) or in parallel. Time delays t1 (fixed) - when changing from faulty to normal state or when de-energized and t2 (adjustable) when changing from normal to faulty state. These delays prevent incorrect conduct and oscillation of output device during short voltage peaks in the main or during gradual voltage decline into normal.

Voltage control

Set upper level Umax in range 138 - 276 V (or 240 - 480 V for HRN-43) and lower level Umin in range 35-99 % Umax. In case any phase passes this range, after a delay which eliminated short voltage peaks, contact opens. Output contact again switches after returning back into monitored voltage range and exceeding fixed hysteresis (which is adjustable in two values by DIP switch). In case of failure of two or three phases, the relay is deactivated immediately regardless of the set delay t2.

Phase sequence

Monitors correctness of phase sequence. In case of unwanted change output contact breaks. In case of energization of a device with incorrect phase sequence, contact stays opened.

Asymmetry

Rate of asymmetry between individual phases is set in a range of 5 - 20 %. In case set asymmetry is exceeded, output relay breaks and LED indicating asymmetry shines. Delays t1, t2 and hysteric are applicable when returning to normal state. Monitoring asymmetry can be switched off by DIP switch ASYM.

Pollution degree:	2
Cable size (mm ²):	max. 1x 2.5, max. 2x 1.5/ with sleeve max. 1x 2.5
Dimensions:	90 x 36 x 66,5 mm (3.6" x 1.5" x 2.7")
Weight:	132 g (4.7 oz.)
Standards:	EN 61812-1, EN IEC 63044

- 3-wire or 4-wire connection (with or without neutral).
- Optionally monitors upper and lower voltage & frequency in 3-phase circuits.
- Allows monitoring of phase sequence, failure and asymmetry incl. neutral fail (only in 4-wire connection).
- The device is supplied from monitored voltage.
- Both output contacts can be set individually.
- Measures real effective value of AC voltage (True RMS).
- Optional response delay of the output contact to the measured fault state or transition from the fault state to the OK state incl. delayed response of output contacts after connecting the power supply.
- Possibility of automatic or manual transition from fault state (memory).
- Optional closing or opening of the output contact when measuring a fault state (Fail Safe / Non Fail Safe).
- Password protection against unauthorized changes to settings.
- Digital backlit display with the possibility of monitoring the current state of the network, incl. possible failures.
- The last five fault states are stored in a history that can be viewed retrospectively.
- Sealable transparent cover for display and controls.

Description

Description of display elements on the screen

Graph legend:

- P_{on} - Power ON delay (delay after power supply connection)
- P_{on} = 0 - 999 s (min. 250 ms hardware initialization)
- T_{on} - ON Delay (delay to OK state)
- T_{on} = 0,5 - 999 s
- T_{off} - OFF delay (delay to fault state)
- T_{off} = 0,1 - 999 s
- T_{off} - Adjustable for OV, UV, OF, UF & asymmetry faults
- T_{off} - Phase sequence, failure <100ms;
- Neutral fail <500ms
- Δt - Duration of the fault state
- (H) Hysteresis

- After the supply/monitored voltage is connected, the delay P_{on} starts timing - during the timing the output contact is in a fault state - in the FAIL SAFE mode it is open. After the delay, if the monitored voltage is in the range U_{min} ... U_{max}, the output contact closes.
- If the monitored voltage exceeds the set value U_{max}, the time delay to the fault state (T_{off}) starts. After the delay, the output contact opens.
- If the monitored voltage falls below the U_{max} value reduced by the set hysteresis, the time delay start to OK state (T_{on}). After the delay, the output contact closes.
- If the duration of the fault state (Δt) is shorter than the set value T_{off}, the status of the output contact does not change.
- If the monitored voltage falls below the value U_{min}, the time delay to the fault state (T_{off}) starts. After the delay, the output contact opens.
- If the monitored voltage exceeds the value U_{min} increased by the set hysteresis, the time delay start to the OK state (T_{on}). After the delay, the output contact closes.
- If the duration of the fault state (Δt) is shorter than the set value (T_{off}), the status of the output contact does not change.

Phase sequence

Graph legend:

- P_{on} - Power ON delay (delay after power supply connection)
- P_{on} = 0 - 999 s (min. 250 ms hardware initialization)

- After the supply/monitored voltage is connected, the delay P_{on} starts timing - during the timing the output contact is in a fault state - in FAIL SAFE mode it is open. After the delay, if the phase sequence is correct, the output contact closes.
- If the phase sequence is incorrect after the P_{on} delay, the output contact remains open (fault state)

Asymmetry, phase failure

Graph legend:

- P_{on} - Power ON delay (delay after power supply connection)
- P_{on} = 0 - 999 s (min. 250 ms hardware initialization)
- T_{on} - ON Delay (delay to OK state)
- T_{on} = 0,5 - 999 s
- T_{off} - OFF delay (delay to fault state)
- T_{off} = 0,1 - 999 s
- T_{off} - Adjustable for OV, UV, OF, UF & asymmetry faults
- T_{off} - Phase sequence, failure <100ms;
- Neutral fail <500ms
- Δt - Duration of the fault state

- After the supply/monitored voltage is connected, the delay P_{on} starts timing - during the timing the output contact is in a fault state - in the FAIL SAFE mode it is open. After the delay, if the phase asymmetry is lower than the set value (absolute or percentage), the output contact closes.
- If the phase asymmetry exceeds the set value, the time delay to the fault state (T_{off}) begins. After the delay, the output contact opens.
- If the phase asymmetry falls below the set value, the time delay starts to OK state (T_{on}). After the delay, the output contact closes.
- If the duration of the fault state (Δt) is shorter than the set value T_{off}, the status of the output contact does not change.
- If a phase failure occurs, the time delay to the fault state (T_{off}) begins. After the delay, the output contact opens.
- If the phase failure resumes, the time delay starts to OK state (T_{on}). After the delay, the output contact closes.
- If the duration of the fault state (Δt) is shorter than the set value T_{off}, the status of the output contact does not change.

- Used for optical signaling of the voltage level in 3-phases.
- Each phase features LED signaling broken is divided by color into voltage levels:
 - voltage in tolerance of $\pm 15\%$ - green
 - overvoltage - red
 - undervoltage - yellow
 - voltage < 50 V - LED not illuminated.
- 4-wire connection - L1, L2, L3, N.
- Monitors phase voltages against neutral wire.
- Not dependent upon order of phases.

Description of device

Function

After connecting the supply voltage, the LED illuminates - the color corresponds to the voltage size of individual phases. If the phase voltage drops under 40 V (phase outage), the corresponding LED is not illuminated.

- Relay monitors phase shift between current and voltage in 3-phase or 1-phase networks - evaluates COS φ (replacement COS-1).
- The relay is designed to monitor overload/relieve the motors.
- Relay is designed for 3 x 400/230 V circuits.
- Galvanically isolated power supply AC 230 V, AC 110 V, AC 400 V or AC/DC 24 V.
- Adjustable upper and lower level COS φ.
- Possibility to extend the current range using a current transformer.
- Two output relays (for each level independent).
- Adjustable delay eliminating engine start-up.

Connection with current transformer

3-phase connection

1-phase connection

Symbol

Function

Status after switching on power, two relay mode

Memory on, two relay mode

decrease (loss) of current

After powering on, the device sets the delay time t1 and yellow LED flashes. Both relays are switched on. The delay serves to eliminate a faulty state when starting the motor. After the time delay t1 begins monitoring COS φ only.

If the COS φ is in the band between the upper and lower limits set, both relays are switched on and the yellow LED is on.

If the COS φ is outside the set limits (> COS φ max or <COS φ min), an error condition occurs - the time t2 is delayed while the red LED corresponding to the COS φ blinks at the same time. After the time delay t2 red LED lights and the corresponding relay remains off.

When the COS φ returns to set limits, the time t1 is delayed and the yellow LED flashes at the same time as the corresponding red LED. After the time delay stops blinking yellow LED, the corresponding red LED turns off and the relay switches on.

At low wattage (<100 mA) or with a power failure, an error is reported by the simultaneous blinking of both red LEDs. After resuming the voltage or the current being watched, the relay returns to the normal state where the COS φ value is monitored.

When the memory is turned off (DIP switch 2 OFF) and the allowable reset (DIP switch 1 ON), the pressing state is reached after the power is turned on, i.e. flashing yellow LED, both relays are switched on, with time delay t1.

When the memory (DIP switch 2 ON) is in an error state (high or low value for cos φ) it should be reset (by pressing the RESET button).

- The relay serves to monitor frequency of AC voltage, e.g. in photovoltaic power stations, generators.
- The monitored frequency 50/60/400 Hz is selected by a switch.
- Two adjustable levels of frequency (Fmin, Fmax) in the range of 80 - 120 % Fn.
- Adjustable difference level.
- Adjustable delay level.

Device description

Functions

After the supply (monitored) voltage is connected, the green LED is on. If the value of the monitored frequency falls within the range between the two set levels Fmin - Fmax no red LED is on. The relay UNDER is triggered (contacts 15-16-18) and the relay OVER is disconnected (contacts 25-26-28).

If the monitored frequency exceeds the set level Fmax, the relay OVER is triggered after the set delay timing elapses and the red LED OVER goes on. The red LED flashes during the timing.

If the monitored frequency drops below Fmax - difference, the relay is activated without delay and the red LED OVER goes off.

If the monitored frequency drops below the set level Fmin, the relay UNDER is disconnected after the set delay timing elapses and the red LED UNDER goes on. The red LED flashes during the timing. If the monitored frequency exceeds the level Fmin + the difference, the relay is triggered without delay and the red LED UNDER goes off.

If the monitored voltage is lower than the opening level Uopen both the relays are disconnected and both the red LED (UNDER and OVER) start flashing slowly - indicating insufficient supply voltage.

- Current transformer is a part of the product. Inside this transformer there is a wire which senses the volume of flowing current.
- This construction reduces thermal stress of product when compared with conventional solutions with inbuilt shunt, and increases current range up to 20 Amps, and galvanically separates monitored circuit.
- For heating bars in sliding rails, heating cables, indication of current flow, controlling of 1-phase motor consumption,...
- Supply is galvanically separated from measuring current.
- Current exceeding - current flowing through monitored wire must not exceed 100 A.

Description

Function

Monitoring relay PRI-32 serves to monitor current level in single phase AC circuits. Due to its fluent adjustment of release current, it is predestined for applications with necessity of current flow indication, and can be used as precedence relay. Output relay is off in normal state. In case the set current level is exceeded, it switches. Multivoltage supply is an advantage.

- It is used, for example, to monitor the operation of pumps, interruptions of radiators or lighting.
- Continuous setting of tripping current by potentiometer from 2 to 6 A AC.
- Monitors the decrease in current magnitude below the level of Imin.
- Adjustable delay 0.5 - 10 s (eliminate short current peaks, on of short...).
- Possible to use for scanning of current from current transformer.
- Power supply galvanically separated from the monitored current circuit.

Description

Function

When the supply voltage is connected, the green LED lights up. If the magnitude of the monitored current is higher than the set level Imin, the relay is closed and the red LED is not lit. If the magnitude of the monitored current falls below the Imin level, the relay opens after the set delay has elapsed and the red LED lights up. The red LED flashes during the delay. If the magnitude of the monitored current returns above the level of Imin + hysteresis, the relay closes without delay and the red LED goes out.

* applicable also for current transformer

- It serves for monitoring of heating in rail-switches, heating cables, consumption of 1-phase motors, indicates current flow.
- Flexible adjustment by potentiometer
- Adjustable delay 0.5 - 10 s to eliminate short current peaks.
- It is possible to use for current scanning from current transformer.
- Supply is galvanically separated from measured current, it must be in the same phase.

Description

Function

Monitoring relay PRI-51 serves to monitor current level in one-phase AC circuits. Gradual setting of actuating current of monitoring relay enables many different applications. Output relay is in normal state opened. After the set current level is reached, relay closes after the set delay (0.5 - 10 s). When returning from faulty to normal state there is a hysteresis (5 %). Multi-voltage of this relay is an advantage. It is possible to monitor load which doesn't have the same supply as monitoring relay PRI-51.

Range of PRI-51 can be increased by an external current transformer.

Connection

Example Connection: PRI-51 with current transformer for current range increase.

Connection

Connection example:
PRI-52 with current transformer for increasing of current range.

- Relay is designated for:
 - cistant device diagnostic (short circuit, take-off increasing)
 - preferred (priority) relay - two appliances (boiler and floor heating) operating on one phase, but never run together - prevention against current overload and circuit breaker tripping. Enables to save your main breaker expenses
 - current tranzit indicator - informs about heating activation, ceramic hob, ventilator...
 - changing over of appliances according to inverter's (converter) output by photocell applications.
- Hole for threaded conductor passes through the body of device.
- Part of device is current transformer, which is sensing size of current in threaded conductor.
- Possible to use also for sensing of current from external current transformer.
- Slight setting (by potentiometer) of tripping current - range AC 0.5 to 25 A.

Description

Functions

Monitoring relay PRI-52 serves for monitoring of current level in 1-phase AC circuits. Slight setting of release current level designates this relay for many various applications. Output relay is in normal status switched off. When set current level is overrun, relay get closed after preset delay. By return from error to normal status is used hysteresis. PRI-52 range is possible to increase with external current transformer. Advantage of PRI-52 is that the hole for threaded conductor is located under the level of covering in the switchboard - thanks that, threaded conductor is not accessible for unwanted manipulation.

Connection

- It is intended for monitoring the current in 3-phase devices (e.g. cranes, motors, etc.).
- 24 - 240 V AC/DC power supply, galvanically separated from the circuit of the monitored current.
- Adjustable delay level (when exceeding the preset limit).
- Adjustable function:
 - UNDER - monitors the drop in the strength of current below the pre-set value (I)
 - OVER - exceeding the preset value (I).
- 2 types depending on the strength of rated current I_n (1 A, 5 A).
- Option of connecting via the current transformers to increase the value of the monitored current.

Description

Functions

After the supply voltage is connected the green LED is on.

UNDER function:

If the strength of the monitored current in all phases exceeds the preset level I, the relay is triggered and the red LED is off. If the strength of the monitored current drops in any phase below the level I, the relay is disconnected after the preset delay timing elapses and the red LED goes on. The red LED flashes during the delay.

If the strength of the monitored current returns above the level I + difference, the relay is triggered without delay and the red LED goes off.

OVER function:

If the strength of the monitored current is lower in all phases than the preset level I, the relay is disconnected and the red LED is off.

If the strength of the monitored current exceeds in any phase the level I, the relay is triggered after the preset delay timing elapses and the red LED goes on. The red LED flashes during the delay.

If the strength of the monitored current again drops below the level I - difference, the relay is disconnected without delay and the red LED goes off.

* Only one of the inputs can be connected.

- Used to monitor overloading/relief (machine, motor, etc.), check consumption, diagnostics on a remote device (burning, short circuit, increased current draw, etc.)
- Relay designed for monitoring DC and AC currents in three ranges.
- the relay controls the current size in two independent levels (I_{max}, I_{min}).
- Setting the monitored level I_{max} (in % of range).
- Setting the monitored level I_{min}. (in % of range - for PRI-42 - function WINDOW), (in % of the set upper limit - for PRI-41 - function HYSTERESIS).
- Function of second relay (independently/in parallel).
- Adjustable delay for eliminating short-term outages and surges for every level independently.
- Galvanically separated power supply from monitoring inputs.
- Output contact: for each current level.

Description

Description and importance of DIP switches

Connection

Symbol

- If the value of the monitored current is in the zone between the set upper and lower levels, the status OK occurs - both relays are closed and the yellow LED illuminates. If the value of the monitored current is outside the set limits (> I_{max} or < I_{min}), an error state occurs.
- When moving to an error state I > I_{max}, it times the delay t₁ and a red LED > I simultaneously flashes. After the t₁ time elapses, the red LED > I illuminates and the relevant relay opens.
- When moving to an error state I < I_{min}, it times the delay t₂ and a red LED < I simultaneously flashes. After the time t₂ elapses, the red LED < I illuminates and the relevant relay opens.
- When moving from the error status to the OK status, the relevant red LED immediately goes out, and the corresponding relay closes.

Symbol

- Relay is designed for monitoring levels in wells, basins, reservoirs, tanks,...
- In one device you can choose the following configurations:
 - One-level switch of conductive liquids (by connecting H and D)
 - Two-level switch of conductive liquids.
- One-state device monitors one level, two-state device monitors two levels (switches on one level and switches off on another level).
- Adjustable time delay on the output (0.5 - 10s).
- Sensitivity adjustable by a potentiometer (5 - 100 kΩ).
- Measuring frequency 10 Hz prevents polarization of liquid and raising oxidation of measuring probes.
- Galvanically separated supply voltage UNI 24 to 240 V AC/DC.

Device description

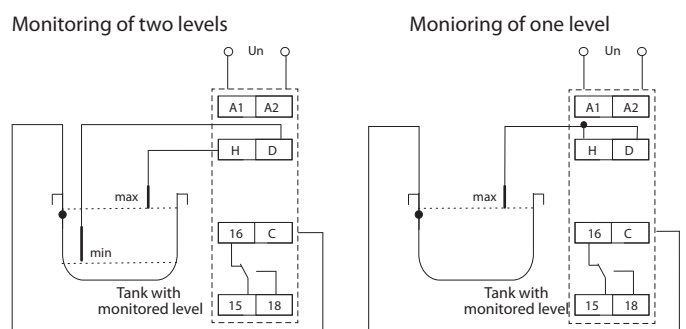

Function

Relay is designated for monitoring of levels of conductive liquids with possibility of functions: PUMP UP or PUMP DOWN. To prevent polarization and liquid electrolysis of liquid, and undesirable oxidation of measuring probes, alternating current is used. For measuring use three measuring probes: H- upper level, D- lower level, C - common probe. In case you use a tank made of a conductive material, you can use it as probe C. In case you require monitoring of one level only, it is necessary to connect inputs H and D and connect them to one probe - in this case sensitivity is lowered by half (2.5 to 50 kΩ). Probe C can be connected with a protective wire of supply system (PE). To prevent undesirable switching out output contacts by various influences (sediment on probes, humidity,...) it is possible to set sensitivity of the device according to conductivity of monitored liquid (corresponding to "resistance" of liquid) range 5 up to 100 kΩ. To reduce influences of undesirable switching of output contacts by liquid gorgle in tanks, it is possible to set delay of output reaction 0.5 - 10 s.

- Adjustable sensitivity using potentiometer (5 -100 kΩ).
- Measuring frequency 10 Hz prevents liquid polarization and increased oxidation of measuring probes.
- Measuring circuits are galvanically separated from the power source of the product and circuits of the relay contact by enhanced insulation according to EN 60664-1 for overvoltage category III.

Device description

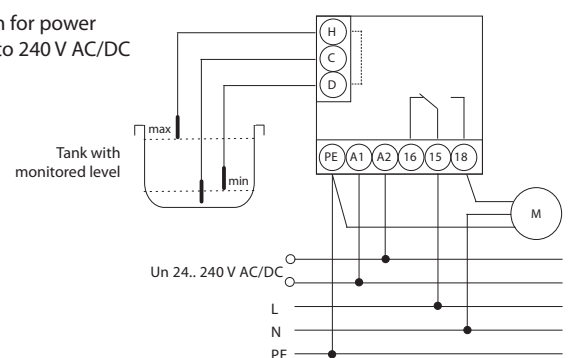

Connection

connection for power supply 230 V AC

connection for power supply 24 to 240 V AC/DC

Symbol

Function

An AC current is used for measuring to prevent polarization and electrolysis of fluid and unwanted oxidation of measuring probes. Three probes are used for measuring: H - upper level, D - lower level and C - common probe. If using a tank made from conductive material, it is possible to use the tank itself as probe C.

If it is necessary to monitor only one level, there are two connection options:

1. Inputs H and D are connected to a single probe - in this case the sensitivity is decreased to half (2.5 to 50 kΩ).
2. Inputs H and C are connected and the probe is connected to input D - in this case, the original sensitivity remains (5 to 100 kΩ).

It is also possible to connect probe C with a protective conductor of the power system (PE).

Example of connecting the level switch to a 1-phase pump at a well, borehole

wiring for supply 230 V AC (for monitoring two levels)

Monitoring TWO LEVELS of the FLUID LEVEL minimum/maximum - DRAINING function - (PUMP DOWN)

Description of draining function:

This function is used in a well or borehole, where the difference between the upper and lower probes determines, how much water the pump can pump out and protect against running dry.

After detecting the maximum level, the set reaction delay begins running. After this period, the output contact immediately switches on the pump, until the minimum level is reached, when the set delay begins running once again. The pump then switches off.

Monitoring TWO LEVELS minimum/maximum - REPLENISHING function - (PUMP UP)

Description of replenishing function:

This function is used when you need to regularly pump in water to a well or borehole, which is leaking.

After detecting the minimum level, the set reaction delay begins running. After this period, the output contact immediately switches on the pump for the period, until it reaches the maximum level, where the set delay begins running once again. The pump then switches off.

Example of connecting the level switch to a 3-phase pump at the well, borehole

wiring for supply 230 V AC (for monitoring two levels)

Monitoring TWO LEVELS minimum/maximum - DRAINING function - (PUMP DOWN)

Description of draining function:

The function is used to protect against overflows and flooding of areas. After detecting the maximum level, the set reaction delay begins running. After this period, the output contact immediately switches on the 3-phase pump, until the minimum level is reached, when the set delay begins running once again. The pump then switches off.

Measuring probes

There can be any measuring probe (any conductive contact, it is recommended to use brass or stainless steel).
 The probe wire does not need to be shielded, but it is recommended.
 When using a shielded wire, the shielding is connected to terminal S.

- Relay is designed to control the level of conductive liquids in wells, tanks, pools, tankers, reservoirs,... (replacement HRH-1).
- Galvanically isolated supply and guard circuits.
- Within one device, the following configurations can be selected:
 - 2x one-level monitoring (in separate tanks)
 - 1x two-level monitoring (in one tank)
 - pumping from one tank to another.
- DIP switch selection on the front panel (8 functions).
- Adjustable probe sensitivity (for each probe separately).
- Adjustable relay switching delay (for each probe separately).
- 10 Hz watch frequency prevents polarization of the liquid and increases resistance to interference by network frequency.

Functions

PUMP UP, ON DELAY (Function 1,3,4)

PUMP DOWN, ON DELAY (Function 2,3,4)

PUMP UP, OFF DELAY (Function 1,3,4)

PUMP DOWN, OFF DELAY (Function 2,3,4)

PUMP UP, OFF DELAY (Function 5)

PUMP UP, ON DELAY (Function 5)

PUMP DOWN, OFF DELAY (Function 6)

PUMP DOWN, ON DELAY (Function 6)

WELL - TANK, OFF DELAY (Function 7)

WELL - TANK, ON DELAY (Function 7)

RESERVOIRS - TANK, OFF DELAY (Function 8)

RESERVOIRS - TANK, ON DELAY (Function 8)

The relay is designed to monitor the level of conductive liquids with a choice of 8 functions:

- 1) - 2 separate tanks (each with 1 probe) - both PUMP UP (filling)
- 2) - 2 separate tanks (each with 1 probe) - both PUMP DOWN (emptying)
- 3) - 2 separate tanks (each with 1 probe) - H PUMP DOWN probe, D PUMP UP probe
- 4) - 2 separate tanks (each with 1 probe) - H PUMP UP probe, probe D PUMP DOWN
- 5) - both probes in one tank - PUMP UP - maintain level between probes H and D (as HRH-5), relay 1 switches on the pump, relay 2 alarm (level is not between probes H and D)
- 6) - Both probes in one tank - PUMP DOWN - maintaining the level between probes H and D (as HRH-5), relay 1 switches on the pump, relay 2 alarm (the level is not between probes H and D)
- 7) - Pumping from the well to the tank - probe D in the well, probe H in the tank. The pump only runs if the probe D is flooded (enough water in the well) and the tank is not full (probe H). The alarm reports a lack of water in the well (probe D is not flooded).
- 8) - Pumping from the sump to the tank - probe D in the sump, probe H in the tank. The pump only runs if the probe D is flooded (full tank) and the tank is not full (probe H). The alarm reports the status of full tank and sump (both probes are flooded).

LED indication:

The red LED lights up - the corresponding relay is switched on
Red LED flashes - delay timing

The yellow LED indicates probe failure - Functions 5, 6 probe H is flooded and probe D is not. At the same time both red LEDs flash.

To prevent polarization and electrolysis of the liquid and undesirable oxidation of the monitoring probes, an AC current of 10 Hz is used for monitoring. The low frequency has a positive effect on suppression of interference by 50 (60) Hz. Three probes are used to monitor the level: H - upper level, D - lower level and C - common probe. In the case of the use of a conductive material tank, it is possible to use the tank itself as a C probe. Probe C can also be connected to the protective conductor of the power supply system (PE). To prevent undesired switching by various influences (soiling of dips, moisture ...), the sensitivity of the device can be set according to the conductivity of the liquid being monitored (corresponding to the "resistance" of the liquid) in the range of 5 to 100 kΩ. To limit the effect of undesired switching of output contacts by raising the liquid level in the tank, it is possible to set the output response delay 0.5 - 10 s.

- The relay is designed to control the level of conductive liquids in wells, sumps, tanks, pools, tankers, reservoirs ...
- Galvanically separated power and monitoring circuits.
- Possibility to connect up to 6 level probes (+ one common probe).
- Each probe has its own output relay function selection for each probe separately.
- Adjustable delay after power on (START Delay).
- Adjustable relay closing delay (Probe Delay) - common for all probes.
- Automatic calibration of the sensitivity of the probes according to the conductivity of the monitored liquid.
- For probes 4, 5, 6 possibility of manual sensitivity adjustment.
- A monitoring frequency of 10 Hz prevents polarization of the liquid and increases the resistance to mains frequency interference.

Function

HRH-9/S

Function

Green LED Un:

- Flashes for START DELAY after the power is turned on
- During this time the device does not respond to the state of the level probes

- After START DELAY, the green LED lights up permanently

START DELAY control:

- sets the START DELAY, delay in the range 0 to 30 minutes

Level probe function switch FUNC. L1 (L2 to L6):

A total of 6 level probes L1 to L6 + common probe C can be connected to the device. Each probe has its own function switch, which sets the functions PUMP UP, PUMP DOWN, ON - permanently

Relay closed, OFF - permanently open relay.

- Positions 1 - 4 = PUMP UP

- Positions 5 - 8 = PUMP DOWN

- Position 9 = ON (relay permanently closed, red LED lit)

- Position 10 = OFF (relay open, red LED not lit)

Each of the PUMP UP, PUMP DOWN functions has 4 response delay setting options:

a - function without delay

b - ON DELAY - delayed closing of the relay

c - OFF DELAY - delayed opening of the relay

d - ON/OFF DELAY - delayed closing and opening of the relay

Each probe then controls its output relay depending on the function switch setting. If a probe is not used, its switch must be set to OFF or ON. PROBES DELAY control:

- sets the delay of the relay response to the change of the state of the level probes

- Delay is standard for all probes - range 0.5 to 10s

LED indication of the status of probes L1 to L6:

Each probe has its own red LED, indicating the status of the probe + output for external LED additional signalling, which copies the status of the internal red LED:

- Probe is not immersed - the red LED is off

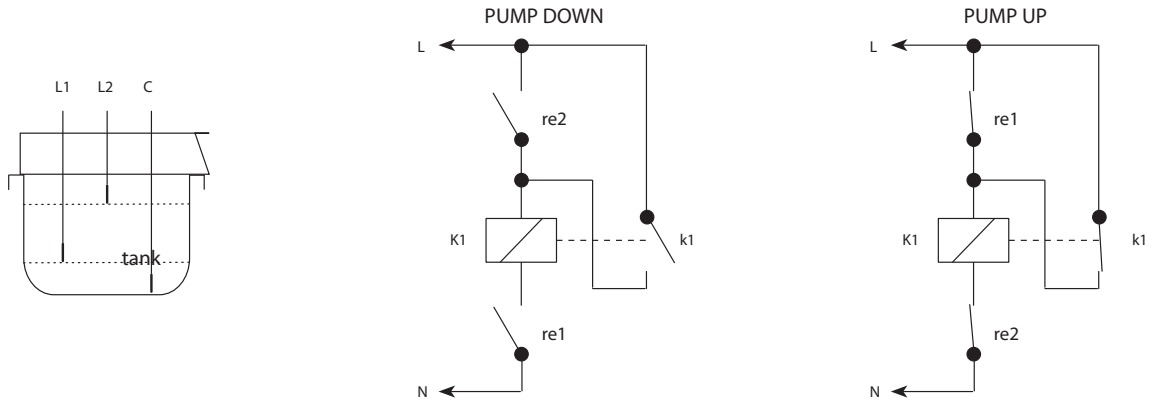

- Probe is immersed, the delay is not running - the red LED is lit.

- Probe has just been immersed and the delay is running - red LED flashes (shorter pulse)

- Probe has just surfaced and a delay is running - red LED flashes (longer pulse)

- Calibration error - red LED flashes quickly

Wiring example

Level probes in the tank:

- the common probe C is positioned so that it is always immersed
- the position of the L1 probe determines the lower level, the position of the L2 probe determines the upper level
- the connection is used to maintain the level between the L1 and L2 probes

Description of the PUMP DOWN function:

- if the tank is empty, both probes L1 and L2 are not immersed, both relays re1 and re2 are open. Contactor K1 controlling the pump is also open (pump stopped)
- if the tank is filled, after reaching the L1 level the relay re1 closes and the state does not change further
- after reaching the level L2 the relay re2 closes and at the same time the contactor K1 closes (the pump works)
- when the level drops below L2, relay re2 opens, but the contactor remains closed via its switching contact k1
- when the level drops below L1, relay re1 opens and at the same time contactor K1 opens (pump stops)

Description of the PUMP UP function:

- if the tank is empty, both probes L1 and L2 are not immersed, both relays re1 and re2 are closed. Contactor K1 controlling the pump is closed (pump is running)
- if the tank is filled, after reaching the level L1 the relay re1 opens - the state does not change - the contactor remains closed via its switching contact k1
- after reaching the level L2, the relay re2 opens and at the same time the contactor K1 (the pump stops)
- when the level drops below L2, relay re2 closes and the state does not change further
- when the level drops below L1, relay re1 closes and at the same time contactor K1 closes (pump starts)

Connection with additional signalization HRH-9/S

EAN code
HRH-6/AC: 8595188136990
HRH-6/DC: 8595188137409

Technical parameters	HRH-6/DC	HRH-6/AC
Function:		2
Voltage range:	12 to 24 V DC	230 V AC (50/60 Hz)
Burden:	max. 1.8 W	max. 3.8 VA
Max. dissipated power (Un + terminals):		3 W
Supply tolerance:	± 20%	-20 %; +10 %

Measuring circuit

Sensitivity adjustable in the range*:	min. 10 kΩ max. 200 kΩ
Voltage on probes:	max. 3 V AC
Probe cable maximum capacity:	500 nF (for min. sensitivity), 50 nF (for maximum sensitivity)
Time delay:	adjustable 1 to 10 s

Output

Number of contacts:	6x LED (1x red, 1x yellow, 4x green)
Current rating:	10 A/AC1
Switching voltage:	2500 VA/AC1, 200 W/DC
Peak current:	16 A/< 3 s
Switching voltage:	250 V AC/24 V DC
Mechanical life (AC1):	30.000.000 operations
Electrical life:	70.000 operations

Other information

Operating temperature:	-20 °C to 55 °C (-4 °F to 131 °F)
Storage temperature:	-30 °C to 70 °C (-22 °F to 158 °F)
Diel. strength (supply - probes):	x 3.75 kV
Operating position:	IP65
Protection degree:	x III.
Overvoltage category:	2
Pollution degree:	110 x 130 x 72 mm (4.3" x 5.1" x 2.8")
Dimensions:	288 g (10.2 oz.) 385 g (13.6 oz.)
Weight:	EN 60255-1, EN 60255-26, EN 60255-27,
Standards:	EN 60669-1, EN 60669-2-1
Recommended measuring probe:	see pg. 126

* Note: sensitivity is higher at both ends of a range of values.

Connection

- Function 1 monitors minimal and maximal level depth, for example in fire engine cars, tanks etc.
- Function 2 monitors level depth in water collectors, basins, pools etc.
- Selection of particular function is made by jumper on the front panel.
- Device monitors 5 levels by using six probes (one probe is common).
- Level indication by six LED's on the front panel of the device.
- It is possible to connect another indication module (e.g. in fire-engine cabin).
- Measuring frequency 10 Hz to prevent polarization of liquid.
- Supply voltage 12 to 24 V DC (to be used in fire-engines) or galvanically separated 230 V AC for general use.
- Contact relay 10 A for signalization of full/empty tank (according to a chosen function).
- Choice of functions PUMP UP/OFF/PUMP DOWN by a switch located on the front panel of the device.

Description

HRH-6/DC Basic unit

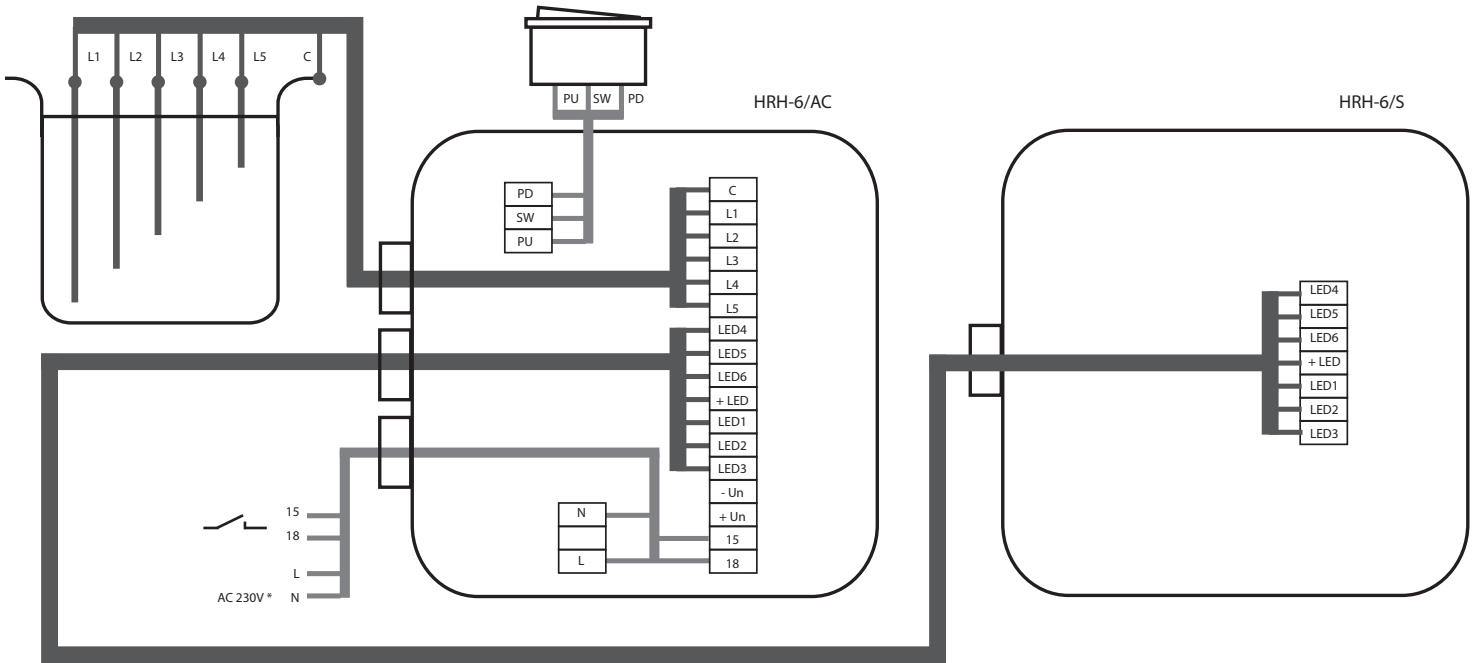

HRH-6/S Auxiliary signalling

Setup elements (inside basic unit)

HRH-6 block connecting

* In case of HRH-6/DC, incoming supply is connected on terminals +Un and - Un.

Functions

This device monitors level of a conductive liquid in a tank by using six single probes or one 6-fold probe. In case you use a tank made of a conductive material, it is possible to use it as a common probe C.

This common probe is connected to a pole of supply (for fire-engines it means its body) in case of supply voltage 12 to 24 V DC.

In case of supply voltage 230 V AC, the circuits are galvanically separated from the main.

The device is controlled by a three-position switch PUMP UP/OFF/PUMP DOWN. After switching into a position PUMP UP or PUMP DOWN, red LED1 shines and then also LED2 to LED6 according to liquid level. Output relay has 2 selectable functions.

Function setting is done by a jumper on basic board of HRH-6.

Function 1: (for use in fire-engines) - jumper is applied. In case of function PUMP UP and level reaching L5, the relay controlling e.g. acoustic signalization, permanently closes and indicated full tank. In case of PUMP DOWN function and level drop under level L3, relay periodically switches and under L2 it switches permanently (indicates almost empty tank).

Function 2: (for keeping liquid level) - jumper is not applied. In case of PUMP UP, sensor is switched until liquid reaches level L5. Then relay opens and switches again in case the liquid level falls under level L1. In case of PUMP DOWN - relay is switched until liquid falls under level L1. Then relay opens and switches again on level L5.

To eliminate LED flashing while level gurgle it is possible to delay reaction of probes (set delay 1 to 10 s). According to conductivity of liquid it is possible to set sensitivity of probes (corresponding to "resistance" of liquid).

Dimensions:		160 x 135 x 83 mm (6.3" x 5.3" x 3.3")
Weight:		743 g (26.2 oz.)
Standards:		EN 60255-1, EN 60255-26, EN 60255-27, EN 60669-1, EN 60669-2-1
Recommended measuring probes:		see pg. 126

Function description

- PUMP UP** - in case the level falls under a lower limit (sensor D), a relay switches and a pump pumps a liquid up until it reaches an upper limit (probe H), then a relay opens and a pump stops pumping. When a level reaches a lower limit again, all process is repeated. After the device is energized, relay automatically closes and a pump pumps liquid to upper limit.
- PUMP DOWN** - in case a level reaches over an upper limit, a relay closes and a pump pumps liquid down. In case a level reaches a lower limit, a relay opens and a pump stops pumping. When energized, a relay is in an open state and a pump operates only after an upper limit is exceeded.
- In case you combine inputs H and D and connect them to one probe, the device will keep only one level (upper and lower limit will become one). In function PUMP UP relay closes in case the level falls under a probe level. A pump pumps liquid up and in case the level reaches a probe level, a relay opens and a pump stops. The level is kept in a small range around the probe. In function PUMP DOWN relays closes in case a level reaches a probe level. A pump pumps down until the level reaches a probe, then relay opens and pump stops.

- In an easy way it automates operations of pumps depending on level.
- Control of level in wells, tanks, reservoirs,...
- It is delivered as a connected set - easy installation.
- Possibility to monitor level of any type of conductive liquid.
- It serves for an automatic operation in 1-phased and 3-phased pumps.
- Set of level switch HRH-5 and a contactor VS425.
- Function choice - pumping up or down.
- Unit requires incoming over-current protection.
- Protection degree of the set is IP65.
- There is a possibility of 4 types of probes in a various design (they are not a part of this set, it is possible to deliver).
- Unit is placed in a plastic box with dimensions 160 x 135 x 83 mm (6.3"x 5.3"x 3.3").

Number of contacts:	4
Rated thermal current:	25 A
Load on AC3:	4 A
Switching voltage:	400 V AC
Electric life (A3):	500.000 operations
Current setting range MS18:	2.5 - 4 A
Other information	
Operating temperature:	-20 °C to 55 °C (-4 °F to 131 °F)
Storage temperature:	-25 °C to 70 °C (-13 °F to 158 °F)
Dielectrical strength:	3.75 kV (supply - probe)
Operating position:	any
Protection degree:	IP65 set
Pollution degree:	2
Dimension:	201 x 202 x 120 mm (7.9 x 7.9 x 4.7")
Weight:	1358 g (47.9 oz.)
Related standards:	EN 60255-1, EN 60255-26, EN 60255-27, EN 60669-1, EN 60669-2-1
Recommended measuring probes:	see pg. 126

- Level sets are used to monitor levels in wells, reservoirs, tanks...
- Advantage is the possibility of setting PUMP UP and PUMP DOWN and also delayed switching (e.g. in case of level fluctuations).
- The possibility of connection to 1 or 3-phase pump (depending on the type of set).
- Easy to install without complicated wiring - ready for installation.
- There are Level sets placed in switchboard with IP65 protection (protected against dust and against water jets)
 - HRH-VS: level switch HRH-5 with installation contactor VS425-40 (25 A contact).
 - HRH-MS-VS-4A: level switch HRH-5 with installation contactor VS425-40 (25 A contact) and with motor starter MS18 2.5-4 A.

Connection

Level set HRH-MS-VS-4A

Functions

PUMP DOWN function (DOWN) used for protection against Idle Running or against overflow and flooding areas. Detecting the maximum level results in activation of adjusted delayed response. After that output contact immediately turns on single or 3-phase pump, until it reaches the minimum level. Then the pump turns off. In case that a reservoir is made of a conductive material, e.g. metal tanks, there can be a difference in connection of HRH-5 level sets - it is not necessary to put inside a common probe „C“ and connect with SHR-2 probe, but thanks to conductivity of vessel we can connect probe C to the reservoir body. The length of wire cable (between the level switch and probe) can be up to 50 m. We don't recommend placing near the power lines, because the sensitivity of equipment can be affected and thus the entire functionality. **Recommended accessories:**

- 3 wire cable D03VV-F 3x0,75/3,2
- 1 wire cable D05V-K 0,75/3,2
- SHR-2 probe - probe covered by PVC (protected) - used in moderately polluted waters, drilling, wells. Assembly - hanging in the well.

SHR-1-M, SHR-1-N

SHR-1-M

SHR-1-N

EAN code
SHR-1-M: 8595188110105
SHR-1-N: 8595188111379

SHR-1-M: brass sensor

SHR-1-N: stainless steel sensor

- Sensor to control flooding.
- Suitable for use in drinking water.
- Electrode with diameter 4 mm (0.2") is placed in plastic cover.
- Panel or to holder mounting.
- Conductor is connected to terminal board, shrink bushing for feeder place insulation is a part of device.
- Max. wire profile: 2.5 mm² (AWG10).
- Installation: after connecting a wire to the sensor, run the shrink bushing over the wire onto the sensor.
- Heat the sensor and by shrinking the connection of sensor and wire will be hermetical.
- Weight: 9.7 g (0.3 oz.)
- Operating temperature: -25 °C to +60 °C (-13 °F to 140 °F)
- Total sensor length: 65.5 mm (2.58")

SHR-2

Level probe **SHR-2**

- Detection sensor is electrode, which in connection with switchable device is used for level detection for example in wells, tanks,...
- To be used in electric conductive fluids and mechanically polluted fluids with temperature: 1°C to 80°C (33.8 °F to 176°F).
- Suitable for use in drinking water.
- Stainless steel one-pole electrode reside in PVC cover, intended for tank wall mounting or mounting by socket.
- To ensure correct function of the sensor, it is necessary to have the electrode without dirt which could disable the connection of the electrode and fluid and thus lead to malfunction.
- Max. wire profile: 2.5 mm² (AWG 10).
- Recommended wire D05V-K0.75/3.2.
- Installation:
 - conductor wire is connected by feazing of two brass screws to stainless steel electrode,
 - conductor is caulked by bushing Pg7 with protection degree IP68.
- Weight: 48.6 g (1.7 oz.)
- Dimensions: max. diameter 21 mm (0.8"), length 96 mm (3.8")

SHR-2 in open state

EAN code
SHR-2: 8595188111263

SHR-3

Level probe **SHR-3**

- Stainless probe to be used into demanding industrial environments, designated for screwing into tank wall or cover.
- Suitable for use in drinking water.
- The probe is installed in horizontal, vertical or in sidelong position on tank side or in tank cover. Installation is done by soldering or by fixing nut. It is necessary to use 24 mm (1") screw. It is necessary to use an adequate torque with regards to a seal and operational over-pressure in a tank.
- Sensor has connecting wire - length 3 m, which is connected to sensor to scan electrode and sensor bushing connecting wire is double-wire PVC AWG 18 (0.75 mm²), connection of wires: brown - scan electrode, blue - sensor bushing.
- Connection M18x1.5 screw.
- Protection degree IP67.
- Sensor weight without cable: 100 g (3.3 oz.).
- Operating surroundings: place without the danger of detonation, temperature on screw: max. 95°C (203°F).
- Pressure immunity: on 25 °C (77 °F) 4 MPa, on 95 °C (203 °F) 1.5 MPa.
- Weight: 239 g (8.4 oz.).
- Material: bushing and scan electrode: stainless steel W.Nr. 1.4301, insulation insert of electrode: PTFE.
- Internal material: self-extinguishing epoxide resin.
- Operating temperature: -25 °C to 60 °C (-13 °F to 140 °F).
- Total sensor length: 65.5 mm (2.58").

D03VV-F | Cables 3x 0.75 mm²

EAN code
D03VV-F 3x0.75/3.2: 8595188165884

Technical parameters	D03VV-F 3x0.75/3.2
Rated voltage:	300/300 V
Test voltage:	2 kV
Capacity:	max. 12.3 nF/100 m (328')
Core diameter with insulation:	3.2 mm (0.12")
Overall diameter of cable:	8.1 mm (0.31")
Section:	0.75 mm ² (AWG 18)
Length:	1 m (39.37")

- Cable to probes SHR-1 and SHR-2, 3x 0.75 mm² (AWG 18) with a certification for drinking water, 1m (39.37').
- Construction:
 - bright copper stranded core of hole
 - core insulation of special PVC
 - sheath of special PVC.
- Technical specifications and usage:
 - the product meets requirements for direct and permanent contact with drinking water according to § 5 of the Act. 258/2000 Decree of the Ministry of Health. 409/2005 Sb., On hygienic requirements for products coming into direct contact with drinking water and water treatment
 - usable up to 70 °C (158 °F)
 - suitable for submersible conductivity probes for the boreholes, wells and tanks
 - suitable for probes used for level detection of conductive liquids
 - cable capacity is max. 12.3 nF/100 m (328').

- Single thermostat for temperature monitoring and regulation in range -30 °C to +70 °C (-22 °F to 158 °F) in six ranges.
- It can be used for monitoring temperature e.g. in switchboards, heating systems, cooling systems, liquids, radiators, motors, devices, open spaces, etc.
- Possibility to set function "heating"/"cooling".
- Adjustable hysteresis (sensitivity), switching by potentiometer in range 0.5 to 5 °C (0.9 to 9 °F).
- Choice of external temperature sensors with double insulation in standard lengths 3, 6 and 12 m (9.8', 19.7' and 39.4').
- It is possible to place sensor directly on terminal block - for temperature monitoring in a switchboard or in its surroundings.
- Red LED indicates status of output, green LED indicates energization of the device.

Description

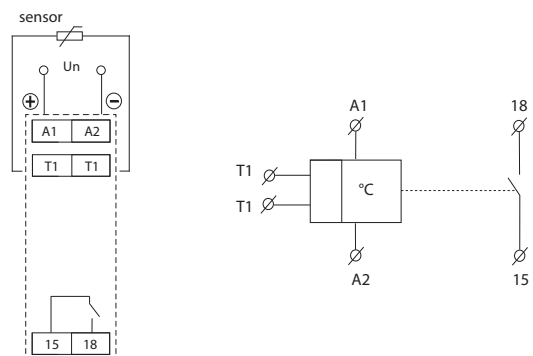

Function

It is a single but practical thermostat with separated sensor for monitoring temperature. Device is placed in a switchboard and external sensor senses temperature of required space, object, or liquid. Supply is not galvanically separated from sensor. Sensor is double insulated. Maximal length of delivered sensor is 12 m/39.4'. device has in-built indication of sensor damage, which means that in case of short-circuit or disconnection red LED flashes. Thanks to adjustable hysteresis, it is advantageous to regulate width of the range and thus define sensitivity of load switching. Sensed temperature is decreased by set hysteresis. When installing it is necessary to keep in mind that hysteresis is increased by temperature gradient between sensor's jacket and thermistor.

Note

Sensors could be in series in abide with conditions in technical specification - switching limits.

Warning:
In case of supply from the main, neutral wire must be connected to terminal A2!

- It monitors motor coil temperature.
- Fixed levels of switching.
- PTC sensor is used for sensing, it is in-built in motor winding by its manufacturer or there is used an external PTC sensor.
- MEMORY function - relay is blocked in an error state until until operator intervention (press RESET button).
- RESET of faulty state:
 - a) button on the front panel (remote)
 - b) by external contact (remote by two wires).
- Terminals of sensor are galvanically separated, they can be shorted out by terminal PE without damaging the device.

Description

Function

The device controls temperature of motor winding with PTC thermistor which is mostly placed in motor winding or very close to it. Resistance of PTC thermistor run to max 1.5 kΩ in cold stage. By temperature increase the resistance goes strongly up and by overrun the limit of 3.3 kΩ the contact of output relay switch off - mostly contactor controlling a motor. By temperature decrease and thereby decrease of thermistor resistance under 1.8 kΩ the output contact of relay again switches on. The relay has function "Control of sensor fault". This controls interruption or disconnection of sensor. When switch is in position "TK" monitoring of faulty sensor is not functional - it is possible to connect bimetal sensor with only 2 states: ON or OFF. The device can work with bi-metal sensor in this position. Other safety unit is function "Memory". By temperature overrun (and output switches off) the output is hold in faulty stage until service hit. This bring the relay to normal stage (with RESET button) on front panel or by external contact (remote).

- Double thermostat for temperature monitoring and regulation over a wide range of temperatures.
- Temperature range switch and fine temperature setting for each thermostat.
- Usable for temperature monitoring in switchboards, heating or cooling systems, motors, liquids, open spaces, etc.
- Galvanically isolated power supply AC 230 V or AC/DC 24 V.
- 2 inputs for temperature sensors NTC 12 k/25 °C.
- Setting independent or dependent thermostat function (see function description).
- Heating/cooling function selection.
- Adjustable switching hysteresis (sensitivity).
- Two output relays (for each level independent).

Description

Description and importance of DIP switches

Connection

Symbol

Function

Each thermostat has its own temperature sensor, coarse and fine temperature setting, hysteresis setting and its output relay.

The set temperature is set as the sum of the selected temperature range and fine temperature setting.

Example: Required temperature + 25 °C (77 °F)
 Set range + 20 °C (68 °F)
 Fine setting 5 °C (41 °F)

The device monitors the failure status of each sensor (short circuit or interruption) - if the sensor fails, the yellow LED is lit and the corresponding red LED flashes. The relevant relay is disconnected when it fails.

The device can also be operated as a single thermostat (single sensor). In this case, a 10 kΩ resistor (part of the product package) must be connected to the unused input.

Independent thermostat function

The device acts as 2 single simple thermostats

Dependent function of thermostats

The thermostats are connected "in series" - i.e. the thermostat 1 is blocked by thermostat 2. This can be used, for example, when thermostat 1 is operational and the thermostat 2 is blocked (emergency - for example, when overheating the device).

- Digital thermostat with 6 functions and built-in time switch clock with day, week and year program. You can also limit temperature functions and courses this way in real time.
- Complex control of home and water heating, solar heating, etc.
- Two thermostats in one, two temperature inputs, two outputs with dry contact.
- Maximum universal and variable thermostat including all ordinary thermostat functions.
- Functions: two independent thermostats, dependent thermostat, differential thermostat, two level thermostat, zone-based thermostat, dead zone thermostat.
- Program setting of output functions, calibration of sensors according to reference temperature (offset).
- The thermostat is subject to the digital clock programs.
- Wide operating range of temperature settings, the possibility of measuring in °C and °F.
- Clear display of set and measured data on a backlit LCD.
- Power supply: AC 230 V or 24 V AC/DC (based on type of device).
- The time switch clock has a battery backup, which retains data in case of a power outage (backup time is up to 3 years).
- Easy replacement of the backup battery through the plug-in module, no disassembling is required.
- Output contact 1x changeover/SPDT 8 A/250 V AC1 for each output.
- 2-MODULE, DIN rail mounting.

Device description

Description of visual elements on the display

Connection

Symbol

1.2 independent single-stage thermostats

Legend:
 Ts1 - real (measured) temperature 1
 Ts2 - real (measured) temperature 2
 T1 - adjusted temperature T1
 T2 - adjusted temperature T2
 H1 - adjusted hysteresis for T1
 H2 - adjusted hysteresis for T2
 dy1 - set switching delay of the output
 dy2 - set delay on output breaking
 15-18 output contact (for T1)
 25-28 output contact (for T2)

Classic function of thermostat, output contact switched until adjusted temperature is reached. Hysteresis eliminates frequent switching - output oscillation.

2. Depending functions of 2 thermostats

Legend:
 Ts1 - real (measured) temperature 1
 Ts2 - real (measured) temperature 2
 T1 - adjusted temperature T1
 T2 - adjusted temperature T2
 H1 - adjusted hysteresis for T1
 H2 - adjusted hysteresis for T2
 dy1 - set switching delay of the output
 dy2 - set delay on output breaking
 25-28 output contact (for T2)
 15-18 output contact (intersection T1 and T2)

Output 15 - 18 is closed, if temperature of both thermostats is below an adjusted level. When any thermostat reaches adjusted level, the contact 15 - 18 opens. Serial inner connection of thermostats (logic function AND).

3. Differential thermostat

Legend:
 Ts1 - real (measured) temperature T1
 Ts2 - real (measured) temperature T2
 D - adjusted difference
 H1 - adjusted hysteresis for T1
 H2 - adjusted hysteresis for T2
 dy1 - set switching delay of the output
 dy2 - set delay on output breaking
 15-18 output contact (for T1)
 25-28 output contact (for T2)

Switching of output corresponds with input, which has lower temperatures when difference is exceeded. Differential thermostat is used for keeping two identical temperature e.g. in heating systems (boiler and reservoir), solar systems (collector - reservoir, exchanger), water heating (water heater, water distribution)etc.

4. 2-stage thermostat

Legend:
 Ts - real (measured) temperature
 T1 - adjusted temperature
 T = T1 - D
 D - adjusted difference
 H1 - adjusted hysteresis for T1
 H2 - adjusted hysteresis for T
 dy1 - set switching delay of the output
 dy2 - set delay on output breaking
 15-18 output contact
 25-28 output contact

Typical example of use for two-stage thermostat is e.g. in boiler-room, where there are two boilers from which one is main and the other one is auxiliary. The main boiler is managed according to set temperature and auxiliary boiler is switched in case, temperature falls under set difference. Thus it helps to the main boiler in case, outside temperature dramatically falls. In the range of set difference (D) output 15-18 functions as normal thermostat to input 1 (type 1). In case temperature falls under set difference, second output switches too.

5. Thermostat with "WINDOW"

Legend:
 Ts - real (measured) temperature
 T1 - adjusted temperature
 T = T1 - D
 H1 - adjusted hysteresis for T1
 H2 - adjusted hysteresis for T
 dy1 - set switching delay of the output
 dy2 - set delay on output breaking
 15-18 output contact
 25-28 output contact

Output is closed (heating) only if temperature is within adjusted range. If temperature is out of range, the contact opens. T is set as T1-D. The function is used for protection of gutters against freezing.

6. Thermostat with dead zone

Legend:
 Ts - real (measured) temperature
 T1 - adjusted temperature
 T = T1 - D
 H1 - adjusted hysteresis for T1
 H2 - adjusted hysteresis for T
 dy1 - set switching delay of the output
 dy2 - set delay on output breaking
 15-18 output contact (heating)
 25-28 output contact (cooling)

In case of thermostat with a „dead zone“, it is possible to set temperature T1 and a difference (respectively a width of dead zone D). If temperature is higher than T1, output contact of cooling switches ON; if the temperature gets below T1, the contact switches OFF. If the temperature gets below temperature T, the contact of heating switches ON and it switches OFF when temperature T is exceeded. This function can be used for example for automatic air warming and cooling in ventilation so the sit is always within the range T1 and T.

Function heating

Function cooling

- Two-level thermostat with function "WINDOW" meaning that output is switched in case, the measured temperature is within set range (adjustable in range -20 až +20 °C/-4 °F to +68 °F).
- Used as protection against freezing (water-shoots, pavements, drives, pipes, etc.) heating is on, when temperature falls under set upper level (e.g. +5 °C/+41 °F) and off in case it falls under lower level (e.g. -10 °C/-50 °F, when heating is not able effectively operate).
- Thermostat is placed in water-proof box with IP65, which allows installation outside, with in-built sensor TZ-0.
- Thermostat status is indicated by LED (3 colours) under transparent cover.
- Function monitoring short-circuit and sensor disconnection (break).

Description

Function

TEV-1 is a double thermostat designated for system of protection of roof water-shoots against freezing. The device is placed in a waterproof box (IP65), sensor with double insulation, which is a part of the device, senses ambient temperature. The device operates as zonal thermostat with independent setting of upper and bottom operational temperature. In case the ambient temperature is higher than T1 (upper temperature), thermostat switches heating of watershoots off (icing melts down). In case the ambient temperature is lower than T2 (bottom temperature), thermostat also switches heating off (to big freezing-heating cannot manage to melt the ice).

- Single thermostat with possibility of temperature management in adjustable range (it is possible to modify this range or make a special one on request).
- Used to regulate heating (or cooling) in demanding environments (outside, humidity, dustiness, etc.).
- Thermostat is placed in water-proof box with IP65 protection, which enables installation outside, with in-built sensor.
- **TEV-2:** control and indication elements are placed under transparent cover.
- **TEV-3:** control and indication elements are placed directly on the cover (for easy orientation and frequent change of temperature).
- Thermostat status is indicated by LED (2 colours).
- Function of monitoring sensor disconnection and short-circuit.

Description TEV-2 (without cover)

Description TEV-3 (cover)

Function TEV-2,TEV-3

TEV-2 and TEV-3 are universal single thermostats for universal use. In case ambient temperature is higher than set temperature relay is open (function HEATING), for cooling function (opposite function) is possible to use NC contact of relay (V2).

Function

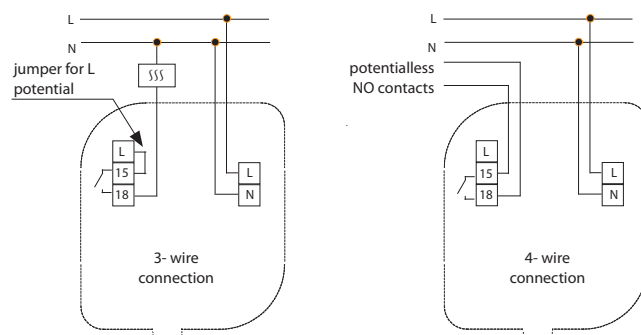

- Single point thermostat for monitoring and regulation of temperature in demanding environments (humid and contaminated, aggressive and defective, industrial workshops, washing rooms, green-houses, cellars and cooling boxes,...).
- External version in IP65, box for mounting on the wall.
- Built-in thermo-sensor is integrated in the device.
- Two functions adjustable by jumper: heating and cooling.
- 3 adjustable (by jumper) ranges of temperature, and fine adjustment through potentiometer.
- 3 adjustable (by jumper) levels of hysteresis.
- Potentialless NO-SPST contact 12 A AC1 switching.

Description

Connection

Description of function

Device is standardly supplied with jumper L-15 (3-wire connection). For the correct function of device is necessary sensor-side down device mounting.

- Hygro-thermostat for temperature monitoring and regulation in range 0 °C to 60 °C (32 °F to 140 °F) and relative humidity monitoring and regulation in range 50 to 90 %.
- Possibility of setting of up to 8 conditions for contact switching and function permanently ON/OFF.
- Sensor is a part of the device - designated for measuring in switchboards.
- Function of sensor control (damage, disturbances,...).
- Fixed setting of temperature hysteresis at 2.5 °C (4.5 °F) and humidity at 4 %.

Device description

Funcions

Choice of function	Relay switched under the following conditions	
A	T > Tset	or RH > RHset
B	T < Tset	or RH > RHset
C	T > Tset	or RH < RHset
D	T < Tset	or RH < RHset
E	T < Tset	and RH < RHset
F	T > Tset	and RH < RHset
G	T < Tset	and RH > RHset
H	T > Tset	and RH > RHset
ON	relay permanently ON	
OFF	relay permanently OFF	

This device is designated for monitoring of parameters of environment (meaning temperature and relative humidity) in switchboards. It enables setting of eight conditions of constact closing and therefore it is usable for various types of load (e.g. fans, heating, air-conditioning, dehydrating units,...).

While installing it is necessary to take into account the fact that hysteresis rises by persistence of measured values between sensor and ambient environment.

The device is equipped by sensor fault detection. In case of sensor fault, exceeding allowed limits (for temperature -30 °C/-22 °F and +80 °C/176 °F; for humidity 5 % and 95 %) or in case of faulty internal communication higher than 50 % (due to e.g. high ambient disturbances) contact opens and sensor fault is indicated. Sensor fault doesn't have influence on function permanently ON or permanently OFF.

Note: In case the conditions for switching are not applied, relay is open.

Examples of daily heating program

LIVING ROOM

BATHROOM

- This energy-saving digital thermo-valve is a programmable regulation device for various heaters, but mainly radiators.
- It can be used to regulate temperature in closed rooms, thus helping to lower heat energy consumption.
- Functions:
 - manual mode - measuring and checking a manually set temperature
 - automatic mode - control between two temperatures based on a set time program:
 - Comfort temperature (factory settings 21 °C/70 °F)
 - Energy-saving temperature (factory settings 16 °C/61 °F).
- Intervals of heating and energy-saving operation can be set using a freely adjustable time program.
 - 8 individually programmable switching times per day:
 - 4 heating intervals
 - 4 energy-saving intervals.
- The device features very quiet operation and long battery life (up 5 years).
- Quick and easy installation.

Description of device

Other functions

1. Time function - the desired temperature can be set for a certain adjustable time interval.
2. Vacation function - while you're gone, you can set and maintain the desired temperature.
3. Open window function - when the temperature drops, the heating valve automatically closes in order to save energy.
4. Child safety block - blocking against undesired interference with the thermostat.
5. Freeze protection - if the temperature drops below 6 °C (43 °F), the valve opens until the temperature again exceeds 8 °C (46 °F). This keeps heaters from freezing.

Adjustment ATV-1

- manual
 - via USB programming adapter PROGmatic
- Using the programming port, in seconds your settings will be transferred into the thermostat.

- Thermodrive is intended for opening or closing valves in heating, cooling or air conditioning systems. It is also suitable for use in a floor heating or ceiling cooling manifolds.
- Available in NO (open without voltage), NC (closed without voltage) and for 230V and 24V.
- The internal principle of operation of the thermo drive mechanism = its movement so that the valve opens/closes is provided by an electric heating element with expansion material, which expands due to temperature changes in the supply voltage.
- The thermodrive is maintenance-free and works completely silently.
- The thermodrive is fitted with a metal nut M30 x 1.5, thanks to which it becomes a 100% fixed part of the valve with this corresponding thread size after installation.
- The stated nut size predetermines the use of a thermocouple with valves from manufacturers such as Herz, HoneyWell, Danfoss, Oventrop and others.

- Telva thermodrive:
 - is characterized by absolutely quiet and maintenance-free operation
 - is designed for installation - control of heating and cooling systems
 - method of mounting the actuator on the controlled valve using an M30 x 1.5 nut
 - any working position.

- Type of use:
 - Underfloor heating - the RFTC-50/G wireless controller measures the room temperature and, based on the set program, sends a command to the RFSA-66M switching element to open/close the TELVA thermo drive on the distributor.

τ65 (95): time, which sensor needs to heat up on 65 (95) % of ambient temperature of environment, in which is located.

- Thermister temperature sensors are made of Negative Temperature Coefficient (NTC) embedded in a PVC or metal sleeve with a thermally-conductive sealer.
- **Sensor TC**
 - lead-in cable to sensor TC is made of wire CYSY 2D x 0.5 mm/0.02".
- **Sensor TZ**
 - cable VO3SS-F 2D x 0.5 mm/0.02" with silicone insulation for use in high temperature applications
 - silicone insulation for use in high temperature applications.
- **Sensor Pt100**
 - shielded silicon 2x 0.22 mm² (AWG 21), shielding connected with a case.
- Temperature sensors can be connected directly to the terminal block.
- Cable lengths can not be changed, connected or modified.

Resistive values of sensors in dependance on temperature

Temperature (°C/°F)	Sensor NTC (kΩ)	Sensor Pt100 (Ω)
20 /68	14.7	107.8
30 /86	9.8	111.7
40 /104	6.6	115.5
50 /122	4.6	119.4
60 /140	3.2	123.2
70 /158	2.3	127.1

Tolerance of sensor NTC 12 kΩ is ± 5 % by 25 °C/77 °F.
Long-term resistance stability by sensor Pt100 is 0.05 % (10 000 hours).

Diagramm of sensor warm up via air

PVC - reaction to water temperature from 22.5 °C to 58 °C (from 72.5 °F to 136.4 °F).

Silicone - reaction to water temperature from 22.5 °C to 63.5 °C (from 72.5 °F to 144.5 °F).

To ensure correct and perfect function of a device and its safe operation, it is necessary to ensure and observe several main regulations:

1. Device supply

- it is necessary to ensure continuous supply of the device without drops and voltage peaks. It is mainly important for device (e.g. dimmers) where there is synchronization managed by sine wave of the main and fault in the main ca cause unreliable function of the device
- it is necessary to observe correct connection of terminals, and in case of DC supply voltage also polarity
- it is necessary to observe allowed tolerance of the size of supply voltage which is given by technical parameters of individual devices

2. Protection of the device

- it is necessary to ensure protection of the device by adequate elements of overvoltage protection – by fuses, by surge arrestors

3. Elimination of disturbances on input circuits

- it is recommended to eliminate disturbances on control inputs of devices by suitable elements (R-C elements) and thus minimize creation of inductive voltage on incoming wires
- pay attention when connecting control inputs and keep in mind max. current and min. voltage at rest, which can cause spontaneous switching of device (e.g. connected glow lamps)

4. Operating conditions

- to assure the granted life and correct functions of device, there is not recommended to leave the device in extreme conditions that could negative way influence the correct device functions - permanent temperature influence over 70°C, aggressive exhalations, chemicals, high relative humidity over 95%, high electromagnetic field or microwave radiation
- for error-free function it is necessary to avoid device placement close to electromagnetic interference source
- all mentioned products fulfill the EMC requirements in accordance with EU Directive 89/336/EEC. Notwithstanding it is necessary to pay attention when devices are connected to circuit with electrical appliances that produce electromagnetic interference (contactors, motors), and pay attention to close power cables. It is recommended that device connecting cables (supply and control inputs) are possibly short and go separately from power cables. In case the device is connected to circuit with contactors or motors, it is necessary to protect the device with appropriate extern protection components - RC members, varistors or surge voltage protector.
- when you use AL wires, it is necessary to follow requirements of ČSN standard 370606: 1959 and ČSN 370606 amendment 2: 1992

5. Device handling and using

- input terminals do not fill-in with high power (for serial terminals max 0.5 N/m), do not give excessive pressure to carrier terminal parts to avoid damage of inner device construction
- protect the device before falls and excessive vibrations that could damage relays contacts
- do not overload input relay's contacts, especially when using loads with other category then AC1
- when at switching of big loads the relay contacts get sealed it is necessary to use inserted contactor or power relay tuned to required load for given application

Description of used protection elements in device

All time and monitoring relays from our assortment are equipped with protective elements (varistors) against possible overvoltage in supply main. Limit voltage of used varistors is 275 V. At short-time overvoltage in supply main varistor decrease its leak resistor and accumulate arisen overvoltage. When this overvoltage behave as short-time peak, varistor is able to react and protect the device against negative influences. As other protection elements there are used transils and zener diodes that eliminate overvoltage impulses in supply and input circuits of device (e.g. when switching inductive loads). In case of switching inductive loads it is recommended to separate a supply of power element (motors, contactors etc.) from supply of measuring and control device inputs.

On the charts bellow you can see oscilographic running of disconnecting of loads (contactors) and reaction of protective elements to arisen voltage pikes.

Process of disconnection of contactor with coil on 230V/AC without R-C member

Process of disconnection of contactor with coil on 230V/AC and R-C member 390 Ohm-330 nF

Process of disconnection of contactor with coil and limited varistor on 230V/AC

Problematic choice of suitable relay contact for a particular load switched with a product is described below. Mostly we experience problems with incorrect choice of load (meaning incorrect relay for a particular load) which results in permanent switching of contact (sealing) or damage on relay contact – which then results in malfunction. What load can you use? Detailed types of load according to standard EN 60947 are described in charts below – categories of use.

Category of use	Typical use	EN
AC current, $\cos\phi = P/S$ (-)		
AC-1	Non-inductive or slightly inductive load, resistance furnace Includes all appliances supplied by AC current with power factor ($\cos \phi$) ≥ 0.95 Examples of usage: resistance furnace, industrial loads	60947-4
AC-2	Motors with slip-ring armature, switching off	60947
AC-3	Motors with short-circuit armature, motor switching when in operation This category applies to switching off motors with short-circuit armature while in operation. While switching, contactor switches current which is 5 up to 7 times rated current of motor.	60947-4
AC-4	Electro-motors with short-circuit armature: start up, braking by backset, changeover	60947
AC-5a	Switching of electrical gas-filled lights, fluorescent lights	60947-4
AC-5b	El. bulb switching Enables low contact loading due to resistance of cold fiber is many times smaller than the one of hot fiber.	60947-4
AC-6a	Switching of transformers	60947-4
AC-6b	Switching of capacitors	60947-4
AC-7a	Switching low inductive loads of home appliances and similar applications	60947
AC-7b	Load of motors for home appliances	60947
AC-8a	Switching of hermetically sealed motors of cooling compressors with manual reset switches against overload Hermetically sealed cooling compressors have to be placed in one box without external shaft or shaft padding and motor must operate with cooling liquid	60947
AC-8b	Switching of hermetically sealed motors of cooling compressors with manual reset switches against overload Hermetically sealed cooling compressors have to be placed in one box without external shaft or shaft padding and motor must operate with cooling liquid	60947
AC-12	Switching of semiconductor loads with separation transformers	60947-5
AC-13	Switching of semiconductor loads with separation transformers	60947-5-1
AC-14	Switching of low electro-magnetic loads (max.72 VA)	60947-5-1
AC-15	Management of alternating electro-magnetic loads This category applies to switching inductive loads with input for closed electro-magnetic circuit higher than 72 VA Use: switching coils of contactors	60947-5
AC-20	Connecting and disconnecting in unloaded states	60947-3
AC-21	Switching resistive loads, including low loading	60947-3
AC-22	Switching of mixed resistive and inductive loads, including low overloading	60947-3
AC-23	Switching of motor loads or other high inductive loads	60947-3
AC-53a	Switching of motors with short-circuit armature with semiconductor contactors	60947

Note: Category AC 15 replaces formerly used category AC 11

DC current, $t = L/R$ (s)

DC-1	Non-inductive or low inductive load, resistive furnaces	60947-4
DC-3	Shunt motors: start-up, braking by backset, reversion, resistive braking	60947-4-1
DC-5	Series motor: start-up, braking by backset, reversion, resistive braking	60947-4-1
DC-6	Non-inductive or low inductive loads, resistive furnaces – el. bulbs	60947-4-1
DC-12	Management of resistive loads and fixed loads with insulation by opto-electric element	60947-5-1
DC-13	Switching of electromagnets	60947-5-1
DC-14	Switching of electromagnetic loads in circuits with limiting resistor	60947-5-1
DC-20a(b)	Switching and breaking without load(a: frequent switching ,b: occasional switching)	60947-3
DC-21a(b)	Switching ohmic loads including limiting overloading (a: frequent switching ,b: occasional switching)	60947-3
DC-22a(b)	Switching of compound ohmic and inductive loads including limited overloads (e.g. shunt motors) (a: frequent switching, b: random switching)	60947-3
DC-23	Switching of highly inductive loads (e.g. series motors)	60947-3

How can you distinguish for which load is our product (relay) designated?

Our company records this information on a products and also in our catalogue, instruction manual and other promotional and technical material (website etc.).

It is important to realize that it is not always possible to point out load because of lack of information about the device (user cannot measure $\cos\phi$) or it is not possible because of inconsistency of parameters of switched device. Manufacturer of relays records always guaranteed parameters in ideal conditions which are done by a norm (temperature, pressure, humidity, etc.) and reality can be in a lot of cases different. Category of use (classification) of a particular relay is done by material of output contacts.

Basic types of materials which are used for production of contacts for high-performance relay are:

- AgCd – suitable for switching ohmic loads. Before of harmfulness of Cd, this type of contact is remitted.
- AgNi – designated for switching resistive loads, good quality switching and conducting (contact doesn't oxidate) small currents/voltages, it is not designated for surge currents and loads with inductive component.
- AgSn or AgSnO₂ –suitable for switching loads with inductive component, not suitable for switching small currents/voltages, it is more resistive to surge currents, suitable for DC voltage switching, less suitable for switching loads of ohmic type.
- Wf (wolfram)-special contact designated for switching surge currents with inductive component.
- with gold (AgNi/Au)- Used for "improving" contacts for low currents/ voltages , prevents oxidation.

Comb busbar CB-17-8

Multifunction time relay CRM-91H, CRM-93H

- for electric appliances, where is necessary to change the exact timing - controlling of the illumination, heating, motors, machines, ventilators, contactors...

Multifunctionality always and everywhere

Multifunction time relay with external potentiometer CRM-91HE

- time adjusting via external operating unit, operating on panel, switchboard doors

Doublestage delay unit SJR-2

- for sequential load switching, electric furnaces, heaters....

Multifunction time relay CRM-161

- for electronic appliances, light control, heating, motors, fans....

Staircase switch CRM-4

- staircase automatic systems, ventilators switching, for multiplace operating illumination on the staircases and halls...

Time relay PLUG-IN type PTRM-216TP

- serves to control light signalization, heating, motor and fan control etc.

Delay OFF without supply voltage CRM-82TO

- delayed back-up switch off at current failure (emergency illumination, emergency respirator)

Asymmetric flasher CRM-2H

- regular rooms ventilation, cyclic humidity exhaustion, illumination controlling, circulation pump, flash, warning appliances, regular pump down, regular irrigation via electromagnetic valve

Singlefunction time relay CRM-81J

- time switch, using for run down the pump after switch off the heating, switching of ventilators ...

Intelligent staircase automat with possible signalling before switch off CRM-46

- starcaise illumination operation
- on-coming switch off signalling (flash = comfort + safety together)

Room energy saving relay CRM-101

- replacement of the card switch (energy saving in the absence of guests)
- The relay controls the hotel room contactor by means of a magnetic door contact and a motion detector

Digital time switch SHT-1/2

- for controlling of all appliances that depend on real time, appliances could be controlled in regular cycles, or according to adjusted program (blocking of main door out of working hours or night)
- in combination with other devices, controlling could be combined (rooms ventilation, irrigation controlling, bell at school or in church...)

Programmable digital relay PDR-2

- illumination, ventilators, contactors controlling, controlling of interlocking plans, system of time abate and blocking (billiards, pin-balls...), away control via external buttons

Twilight switch SOU-1

- outdoor illumination switching (garden illumination), flash, shop-window, hall and office illumination (switch off in desired light level, controlling of intensity)

Delay on star/delta CRM-2T

- motor starting more than 3 kW, electronic switchover from mode start to mode operation with device CRM-2T, what assures exact timing

Modular contactor VS120, VS220, VS420, VS425

- to switch circuits for supply and control of heating, lights, air-conditioning and other el. devices.
Switches loads AC-1, AC-3, AC-7a, AC-7b, AC-15.

Modular contactors VS440, VS463

- to switch supply and control circuits for heating, air-conditioning and other el. devices, switching 3-phase motors
Switches loads A-1, AC-3, AC-7a, AC-7b, and AC-15

Digital time switch SHT-1, SHT-1/2

- for controlling of all appliances that depend on real time, in daily or weekly mode

Staircase automat with dimming DIM-2

- step by step (fluent) dim up, adjusted time is ON and fluent dim down (e.g. possible to adjust permanent shine to min. brightness everlasting light)
- block of flats (entry, halls, staircases), garden lighting

Monitoring voltage relay HRN-33 (35)

- monitoring of mains voltage for appliances inclinable to supply tolerance

Monitoring voltage relay HRN-33 (35)

- protection of appliances against under-/overvoltage

Investment into basic monitoring unit pays off. Damage could be far higher

Switching power supply PS-R

- power supply of any devices and appliances via safe voltage with full galvanically separated from mains
- power supply of driving systems, interlocking plants and use in measurement and control

Controlling and signalling units USS

- compact dimensions, elegant design, wide range of use, configuration for request
- switching and signalling in switchboard, controlling centre, automation...

Singal lights that shine and flash: Wide range of switches, alternating switches and that all in double design into 1-MODULE

Monitoring voltage relay HRN-35

- start of back-up supply in case of failure

Monitoring voltage relay HRN-34

- load disconnected when voltage declines or battery is discharged

Memory relay MR-41, MR-42

- because of 2-wire parallel buttons connection save money, place and time during the installation
- light switching, hall, staircase, big rooms, controlling systems, automation

Power relays VS

- switching of higher load than is capacity of switched unit = repeater
- assistant light controlling, signalling, boilers, ...

Monitoring current relay PRI-51, PRI-32

- current-limiting relay (on one branch two appliances, which never work together), controlling systems, motors, heating, current indication, controlling of 1-phase motor run down, during the installation of main housing switchboard could be controlled via eye, if the cooker is not switched
- in connection with current transformers, it is possible to extend current ranges up to 600A, which makes more things possible

Relay monitoring power factor COS-2

- monitors power-factor in 3-phase mains / unloading of motors, pumps, lift systems

Monitoring voltage relay HRN-43

- regulation of voltage from generator, water el. plants, 3-phase control in the main
- monitors and protects main's quality

Level switch HRH-8

- monitoring level in wells, tanks, pools, etc.

Level switch HRH-5

- monitoring level in well, sump, tanks, silo...

Thermostat TER-3 with external sensor

- control of temperature of floor heating

2 stage thermostat TER-4 with 2 external sensors

- control of temperature of e.g. gas/electric boiler

Thermostat for thermal protection of motors TER-7

- protection of motors against thermal overload

Multifunction digital thermostat TER-9

- complex control of heating and water heating in a house

Relay monitoring sequence and failure of phases HRN-55, HRN-55N
 - monitoring of proper motor rotation, electric drive, etc.

Has your motor ever burnt out?
 And you didn't know why?
 Our relay will tell you.

Relay monitoring over-/undervoltage in 3-phase mains HRN-54N
 - monitoring voltage in switchboard, protection of appliances

Easy and compact solution for monitoring „sensitive“ devices in 3-phase mains. Prevent problems.

Monitoring voltage relay for under/vervoltage for 3-phase mains HRN-54
 - comfortable monitoring of 3-phase mains

Monitoring current relay PRI-41 (PRI-42)
 - monitoring over-/underload (machine, motor ...)
 - monitoring consumption, diagnostics of distant appliance (short circuit, increased consump. ...)

One-phase current under magnifying glass
