

- Level sets are used to monitor levels in wells, reservoirs, tanks...
- Advantage is the possibility of setting PUMP UP and PUMP DOWN and also delayed switching (e.g. in case of level fluctuations).
- The possibility of connection to 1 or 3-phase pump (depending on the type of set).
- Easy to install without complicated wiring - ready for installation.
- There are Level sets placed in switchboard with IP65 protection (protected against dust and against water jets)

Functions

PUMP DOWN function (DOWN) used for protection against Idle Running or against overflow and flooding areas.

Detecting the maximum level results in activation of adjusted delayed response. After that output contact immediately turns on single or 3-phase pump until it reaches the minimum level. Then the pump turns off.

In case that a reservoir is made of a conductive material e.g. metal tanks, there can be a difference in connection of HRH-5 level sets - it is not necessary to put inside a common probe „C“ and connect with SHR-2 probe, but thanks to conductivity of vessel we can connect probe C to the reservoir body.

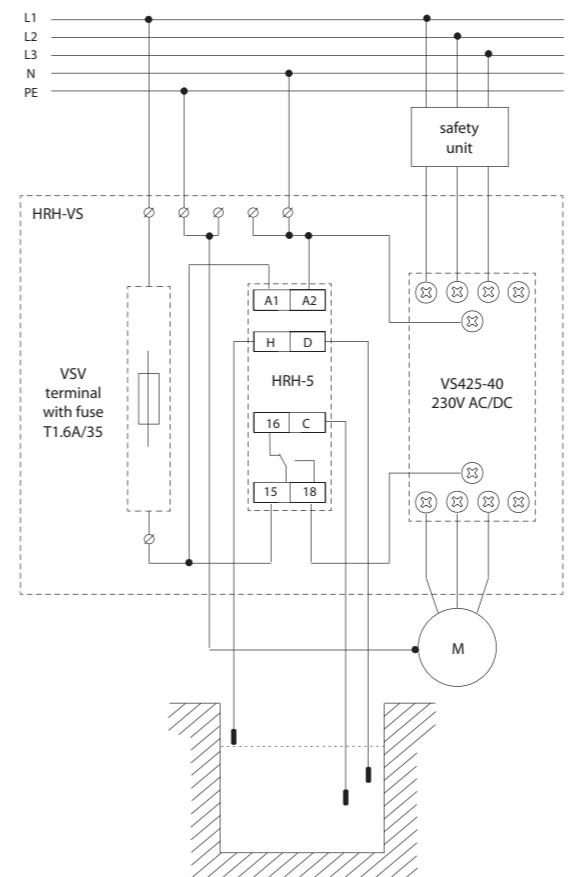

The length of wire cable (between the level switch and probe) can be up to 50 m. We don't recommend placing near the power lines, because the sensitivity of equipment can be affected and thus the entire functionality.

Recommended accessories:

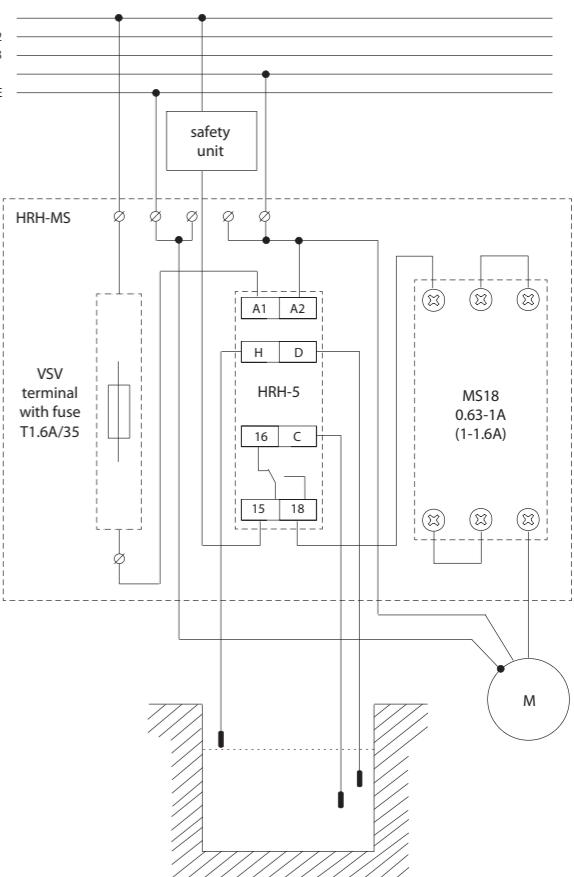

- 3 wire cable D03VV-F 3x0,75/3,2
- 1 wire cable D05V-K 0,75/3,2
- SHR-2 probe - probe covered by PVC (protected) - used in moderately polluted waters, drilling, wells. Assembly - hanging in the well.
